### **OWNER'S MANUAL 2018**

250 EXC TPI 250 EXC Six Days TPI 250 XC-W TPI 300 EXC TPI 300 EXC Six Days TPI

Art. no. 3213645en

Congratulations on your decision to purchase a KTM motorcycle. You are now the owner of a state-of-the-art sports motorcycle that will give you enormous pleasure if you service and maintain it properly.

We hope you enjoy your new vehicle!

Enter the serial numbers of your vehicle below.

Chassis number (🕮 p. 15)	Dealer's stamp
Engine number (📖 p. 15)	
Key number (All EXC models) (🕮 p. 15)	

The Owner's Manual contained the latest information for this model series at the time of going to print. However, minor differences due to further developments in design cannot be ruled out completely.

All specifications are non-binding. KTM Sportmotorcycle GmbH specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from figures and descriptions, misprints, and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of supply.

# **1 MEANS OF REPRESENTATION**

1.1	Symbols used
The meanir	ng of specific symbols is described below.
$\checkmark$	Indicates an expected reaction (e.g. of a work step or a function).
X	Indicates an unexpected reaction (e.g. of a work step or a function).
4	All work marked with this symbol requires specialist knowledge and technical understanding. In the interest of your own safety, have these jobs performed by an authorized KTM workshop! Your motorcycle will be optimally cared for there by specially trained experts using the auxiliary tools required.
	Indicates a page reference (more information is provided on the specified page).
i	Indicates information with more details or tips.
<b>»</b>	Indicates the result of a testing step.
•	Indicates the end of an activity including potential reworking.

1.2 Formats used		
The typographical formats used in this document are explained below.		
Proprietary name	Indicates a proprietary name.	
Name®	Indicates a protected name.	
Brand™	Indicates a brand available on the open market.	
Underlined terms	Refer to technical details of the vehicle or indicate technical terms, which are explained in the glossary.	

#### 2.1 Use definition - intended use

### (All EXC models)

This vehicle is designed and built to withstand the normal stresses and strains of competitive use. This vehicle complies with the currently valid regulations and categories of the top international motorsport organizations.

This vehicle is only authorized for operation on public roads in the homologated (restricted) version. The derestricted version of this vehicle must only be operated in closed off areas away from public highway traffic.

This vehicle is designed for use in offroad endurance competition, and not primarily for use in motocross.

### (250 XC-W TPI US)

This vehicle is designed and built to withstand the normal stresses and strains of competitive use. This vehicle complies with the currently valid regulations and categories of the top international motorsport organizations.

### Info

This vehicle is not approved for use on public roads. This vehicle is designed for use in offroad endurance competition, and not primarily for use in motocross.

#### 2.2 Misuse

The vehicle must only be used as intended.

Dangers can arise for people, property and the environment through use not as intended.

Any use of the vehicle beyond the intended and defined use constitutes misuse.

Misuse also includes the use of operating and auxiliary fluids which do not meet the required specification for the respective use.

#### 2.3 Safety advice

A number of safety instructions need to be followed to operate the vehicle safely. Therefore, read this manual carefully. The safety instructions are highlighted in the text and are referred to at the relevant passages.

### Info

The vehicle has various information and warning labels at prominent locations. Do not remove information/warning labels. If they are missing, you or others may not recognize dangers and may therefore be injured.

### 2.4 Degrees of risk and symbols

### Danger

Indicates a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

### Warning

Indicates a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

Caution
Indiantan

Indicates a danger that may lead to minor injuries if the appropriate measures are not taken.

### Note

Indicates a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

### A Warning

<sup>5</sup> Indicates a danger that will lead to environmental damage if the appropriate measures are not taken.

### 2.5 Tampering warning

Tampering with the noise control system is prohibited. Federal law prohibits the following acts or the causing thereof:

- 1 The removal or rendering inoperative by any person other than for purposes of maintenance, repair, or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use, or
- 2 the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

- 1 Removal or puncturing of the main silencer, baffles, header pipes or any other components which conduct exhaust gases.
- 2 Removal or puncturing of parts of the intake system.
- 3 Lack of proper maintenance.
- 4 Replacing moving part of the vehicle, or parts of the exhaust or intake system, with parts other than those specified by the manufacturer.

### 2.6 Safe operation

### Danger

- Danger of accidents A rider who is not fit to ride poses a danger to him or herself and others.
- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

### Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

### Warning

Danger of burns Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

Only operate the vehicle when it is in perfect technical condition, in accordance with its intended use, and in a safe and environmentally compatible manner.

The vehicle should only be used by trained persons. An appropriate driver's license is needed to ride the vehicle on public roads.

Have malfunctions that impair safety promptly eliminated by an authorized KTM workshop. Adhere to the information and warning labels on the vehicle.

### 2.7 Protective clothing

### Warning

**Risk of injury** Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

In the interest of your own safety, KTM recommends that you only operate the vehicle while wearing protective clothing.

### 2.8 Work rules

Special tools are necessary for certain tasks. The tools are not a component of the vehicle, but can be ordered using the number in parentheses. Example: bearing puller (15112017000)

During assembly, use new parts to replace parts which cannot be reused (e.g. self-locking screws and nuts, seals, sealing rings, O-rings, pins, and lock washers).

In the case of certain screws, a thread locker (e.g. **Loctite®**) is required. Apply according to the manufacturer's instructions.

After disassembly, clean the parts that are to be reused and check them for damage and wear. Change damaged or worn parts.

After completing a repair or service work, check the operating safety of the vehicle.

### 2.9 Environment

If you use your motorcycle responsibly, you can ensure that problems and conflicts do not occur. To protect the future of the motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others.

When disposing of used oil, other operating and auxiliary fluids, and used components, comply with the laws and regulations of the respective country.

Because motorcycles are not subject to the EU regulations governing the disposal of used vehicles, there are no legal regulations that pertain to the disposal of an end-of-life motorcycle. Your authorized KTM dealer will be glad to advise you.

### 2.10 Owner's Manual

It is important that you read this Owner's Manual carefully and completely before making your first trip. The Owner's Manual contains useful information and many tips on how to operate, handle, and maintain your motorcycle. Only then will you find out how to customize the vehicle ideally for your own use and how you can protect yourself from injury.

Keep the Owner's Manual in an accessible place to enable you to refer to it as needed.

If you would like to know more about the vehicle or have questions on the material you read, please contact an authorized KTM dealer.

The Owner's Manual is an important component of the vehicle and must be handed over to the new owner if the vehicle is sold.

The Owner's Manual is also available for download from your authorized KTM dealer and on the KTM website. International KTM Website: http://www.ktm.com

### 3.1 Manufacturer and implied warranty

The work specified in the service schedule may only be performed in an authorized KTM workshop and must be recorded in both the Service & Warranty Booklet and in **KTM Dealer.net**, otherwise any warranty coverage will become void. Damage or secondary damage caused by tampering with and/or conversions on the vehicle are not covered by the warranty.

Additional information on the manufacturer or implied warranty and the procedures involved can be found in the Service & Warranty Booklet.

### 3.2 Operating and auxiliary substances

### 2 Warning

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Use operating and auxiliary substances (such as fuel and lubricants) as specified in the Owner's Manual.

### 3.3 Spare parts, accessories

For your own safety, only use spare parts and accessory products that are approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss.

Certain spare parts and accessory products are specified in parentheses in the descriptions. Your authorized KTM dealer will be glad to advise you.

The current **KTM PowerParts** for your vehicle can be found on the KTM website. International KTM Website: http://www.ktm.com

### 3.4 Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care, and tuning work on the engine and chassis is properly carried out as described in the Owner's Manual. Incorrect adjustment and tuning of the engine and chassis can lead to damage and breakage of components.

Use of the vehicle under difficult conditions, such as on sand or on wet and muddy surfaces, can lead to considerably more rapid wear of components such as the drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

It is imperative that you adhere to the stipulated run-in times and service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle.

### 3.5 Figures

The figures contained in the manual may depict special equipment.

In the interest of clarity, some components may be shown disassembled or may not be shown at all. It is not always necessary to disassemble the component to perform the activity in question. Please follow the instructions in the text.

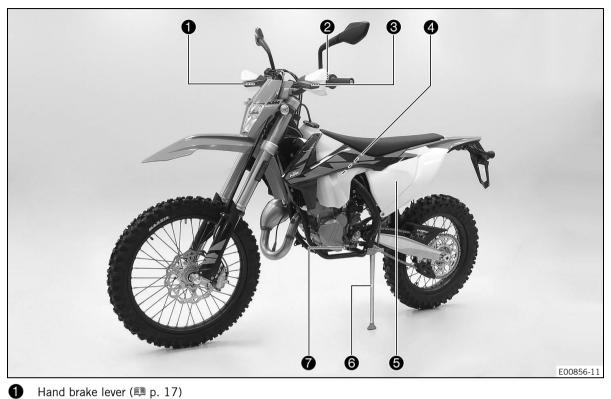

### 3.6 Customer service

Your authorized KTM dealer will be happy to answer any questions you may have on your vehicle and KTM.

A list of authorized KTM dealers can be found on the KTM website. International KTM Website: http://www.ktm.com

### 4 VIEW OF VEHICLE

4.1 View of vehicle, front left (example)

- 2 Light switch (

### **5 SERIAL NUMBERS**

# 5.1 **Chassis number** The chassis number 1 is stamped on the right side of the steering head. 1 401945-10 5.2 Type label Type label 1 is fixed to the front of the steering head. 1 401946-10 5.3 Key number (All EXC models) The key number **1** for the steering lock is stamped onto the key connector. 402247-10 Engine number 5.4 The engine number 1 is located on the left side of the engine over the engine sprocket.

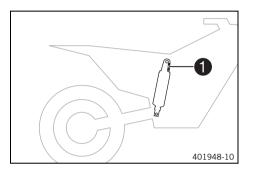

## **5 SERIAL NUMBERS**

### 5.5 Fork part number

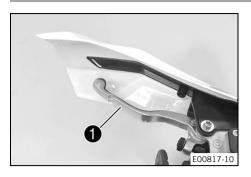

The fork part number **1** is stamped on the inside of the axle clamp.

### 5.6 Shock absorber article number

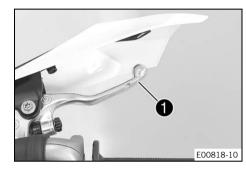

Shock absorber article number **1** is stamped on the top of the shock absorber above the adjusting ring towards the engine side.

### 6.1 Clutch lever

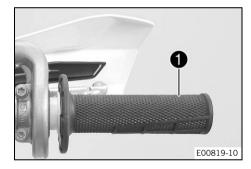

Clutch lever **1** is fitted on the handlebar on the left. The clutch is activated hydraulically and adjusts itself automatically.

### 6.2 Hand brake lever

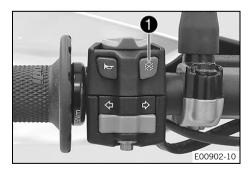

Hand brake lever ① is fitted on the right side of the handlebar. The front brake is engaged using the hand brake lever.

### 6.3 Throttle grip

Throttle grip **()** is fitted on the right side of the handlebar.

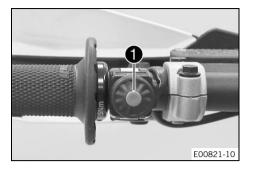

### 6.4 Kill switch (All EXC models)

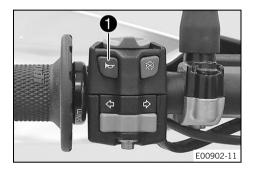

The kill switch **1** is fitted on the left side of the handlebar. **Possible states** 

- Kill switch ⊗ in the basic position In this position, the ignition circuit is closed and the engine can be started.
- Kill switch ⊗ is pressed In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

### 6.5 Kill switch (250 XC-W TPI US)

### 6.6 Horn button (All EXC models)

The horn button **()** is fitted on the left side of the handlebar. **Possible states** 

The kill switch 1 is fitted on the left side of the handlebar.

circuit is closed and the engine can be started.

Kill switch  $\otimes$  in basic position – In this position, the ignition

Kill switch  $\otimes$  pressed – In this position, the ignition circuit

is interrupted, a running engine stops, and a non-running

• Horn button in neutral position

engine will not start.

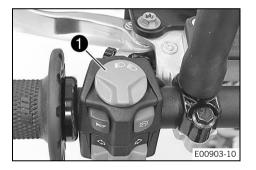

Possible states

•

•

• Horn button pressed – The horn is operated in this position.

6.7 Light switch (All EXC models)

Possible states  $\Box_{1} = \Box_{1} \cup \Box_{2} \cup \Box_{2$ 

Light switch 1 is fitted on the left side of the handlebar.

≣D	tion. In this position, the low beam and tail light are switched on.
ΞD	High beam on – Light switch is turned to the left. In this position, the high beam and the tail light are switched on.

### 6.8 Light switch (250 XC-W TPI US)

The light switch **1** is located to the left of the combination instrument.

#### Possible states

- Light off Light switch is pressed in up to the stop. In this position, the light is switched off.
- Light on Light switch is pulled out to the stop. In this position, the low beam and tail light are switched on.

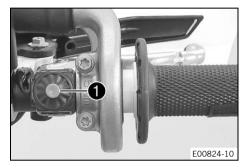

### 6.9 Turn signal switch (All EXC models)

Turn signal switch **1** is fitted on the left side of the handlebar. **Possible states** 

	Turn signal off – The turn signal switch is in the cen- tral position.
+	Left turn signal, on – The turn signal switch is turned to the left.
•	Right turn signal, on – The turn signal switch is turned to the right.

### 6.10 Electric starter button

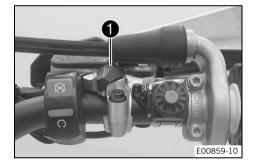

The electric starter button **1** is fitted on the right side of the handlebar.

#### **Possible states**

- Electric starter button (3) in basic position
- Electric starter button ③ pressed In this position, the electric starter is actuated.

### 6.11 Map switch (All Six Days models)

The map switch **1** is fitted on the right side of the handlebar. **Possible states** 

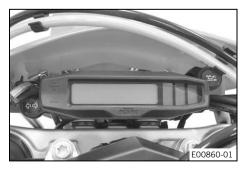

- Map switch in position I The ignition timing map **Perfor**mance is active in this position.
- Map switch in position **II** The ignition timing map **Soft** is active in this position.

The engine characteristic can be altered with the map switch.

### Info

The map switch has no function in the homologated (restricted) condition of the motorcycle.

### 6.12 Indicator lamps overview (All EXC models)

Possible s	tates
≣D	The high beam indicator lamp lights up blue – The high beam is switched on.
¢,	Malfunction indicator lamp lights up/flashes yellow – The <u>OBD</u> has detected an error in the vehicle elec- tronics. Come safely to a halt, and contact an autho- rized KTM workshop.
	The fuel level warning lamp lights up yellow – The fuel level has reached the reserve mark.
	Turn signal indicator lamp flashes green – The turn signal is switched on.

19

The oil level warning lamp lights up red – Oil level has reached the **MIN**marking. Ride for no more than until the remaining fuel in the tank is depleted and at the next opportunity refuel with 2-stroke oil.

### 6.13 Indicator lamps overview (250 XC-W TPI US)

Possible st	ates
≣D	High beam indicator lamp – inoperative
Ċ	Malfunction indicator lamp lights up/flashes yellow – The <u>OBD</u> has detected an error in the vehicle elec- tronics. Come safely to a halt, and contact an autho- rized KTM workshop.
	The fuel level warning lamp lights up yellow – The fuel level has reached the reserve mark.
	The oil level warning lamp lights up red – Oil level has reached the <b>MIN</b> marking. Ride for no more than until the remaining fuel in the tank is depleted and at the next opportunity refuel with 2-stroke oil.

### 6.14 Opening the filler cap

### Danger

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

### Warning

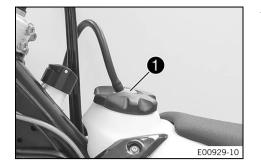

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

### g Warning

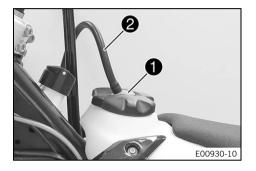

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Press release button ①, turn the filler cap counterclockwise and lift it free.

### 6.15 Closing the filler cap

Fit the filler cap and turn clockwise until release button **1** locks in place.

\_

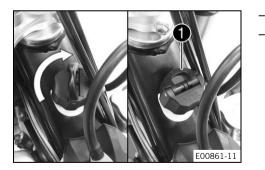

### 6.16 Opening 2-stroke oil tank cap

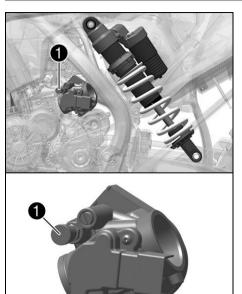

- Fold loop ①upward.
- Turn the 2-stroke oil tank cap counterclockwise and pull it up.

6.17 Closing 2-stroke oil tank cap

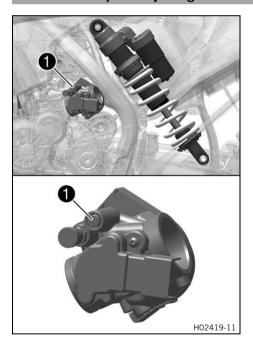

- Put the 2-stroke oil tank cap on and turn it clockwise.
- Fold loop **1** down.
- ✓ The 2-stroke oil tank cap engages.

### 6.18 Cold start button

6.19 Idle speed adjusting screw

The cold start button **1** is fitted on the side of the throttle valve body.

The <u>injection system</u> extends the injection time if the engine is cold and the outside temperature is low. To help the engine burn the increased amount of fuel, it must be supplied with additional oxygen by pulling the cold start button.

### Info

H02419-10

If the engine is warm, the cold start button must be deactivated.

#### Possible states

- The cold start button is activated The cold start button is pulled out all the way and turned by a <sup>1</sup>/<sub>4</sub> turn.
- The cold start button is deactivated A further <sup>1</sup>/<sub>4</sub> turn returns the cold start button back to the basic position.

The idle setting of the throttle valve body has a big influence on the vehicle's starting behavior, on stable idling, and on vehicle response when the throttle is opened.

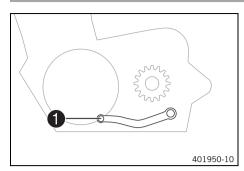

An engine with a correctly set idle speed is easier to start than an engine with the idle speed set incorrectly.

The idle speed is adjusted using the idle speed adjusting screw  $\bigcirc$ .

Decrease the idle speed by turning the idle speed adjusting screw clockwise.

Increase the idle speed by turning the idle speed adjusting screw counterclockwise.

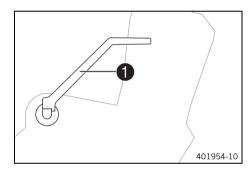

### 6.20 Shift lever

Shift lever 1 is mounted on the left side of the engine.

 The gear positions can be seen in the photograph. The neutral or idle position is between the first and second gears.

6.21 Kick starter

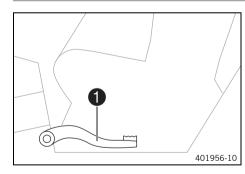

Kick starter **1** is fitted on the right side of the engine. The top part of the kick starter pivots.

### Info

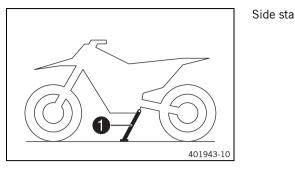

Before riding, swing the top part of the kick starter inward toward the engine.

6.22 Foot brake lever

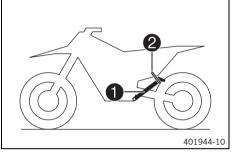

Foot brake lever **1** is located in front of the right footrest. The foot brake lever is used to activate the rear brake.

6.23 Side stand

Side stand **()** is located on the left side of the vehicle.

The side stand is used for parking the motorcycle.

• Info

When you are riding, side stand 1 must be folded up and secured with rubber band 2.

6.24 Steering lock (All EXC models)

Steering lock ① is fitted on the left side of the steering head. The steering lock is used to lock the steering. Steering, and therefore riding, is no longer possible.

### 6.25 Locking the steering (All EXC models)

### Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

- Park the vehicle.
- Turn the handlebar as far as possible to the right.
- Insert the key in the steering lock, turn it to the left, press it in and turn it to the right. Remove the key.
  - ✓ Steering is no longer possible.

Never leave the key in the steering lock.

đ

### 6.26 Unlocking the steering (All EXC models)

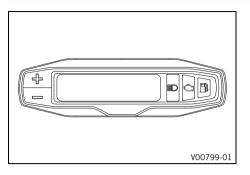

- Insert the key in the steering lock, turn it to the left, pull it out and turn it to the right. Remove the key.
  - ✓ You can now steer the bike again.

### Info

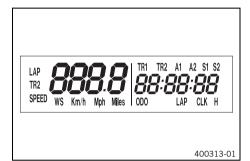

i

Never leave the key in the steering lock.

### 7.1 Combination instrument overview

### 7.2 Activation and test

### – The button $\pm$ is used to select menus and make settings.

The button - is used to select menus and make settings.

### Info

When the vehicle is delivered, only the **SPEED/H** and **SPEED/ODO** display modes are activated.

#### Activating combination instrument

The combination instrument is activated when one of the buttons is pressed or an impulse comes from the wheel speed sensor.

### **Display test**

To enable you to check that the display is functioning properly, all display segments light up briefly.

#### WS (wheel size)

Info

After the display function check, the wheel circumference **WS** is displayed briefly.

The number 2205 equals the circumference of the 21" front wheel with standard tires.

The display then changes to the last selected mode.

### 7.3 Setting the kilometers or miles

### Info

If you change the unit, the value **ODO** is retained and converted accordingly. The values **TR1**, **TR2**, **A1**, **A2** and **S1** are cleared when the unit of measure is changed.

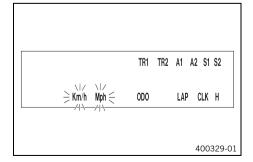

#### Condition

The motorcycle is stationary.

- Press the button  $\pm$  for 2–3 seconds.
- The Setup menu is displayed and the active functions are shown.
- Repeatedly press the button + briefly until Km/h/Mph flashes.

### Setting the Km/h

Press the button +.

### Setting the Mph

Press the button —.

- Wait 3 5 seconds.
- The settings are stored.

### Info

If no button is pressed for 10-12 seconds, or if an impulse comes from the wheel speed sensor, the settings are automatically saved and the setup menu is closed.

### 7.4

### Adjusting the combination instrument function

1

Info

When the vehicle is delivered, only the SPEED/H and SPEED/ODO display modes are activated.

	⇒TR1 < TR2	A1 A2 S1 S2
Km/h Mph	ODO	LAP CLK H
		400318-01

### Condition

The motorcycle is stationary.

- Press the button  $\pm$  for 2–3 seconds.
  - The Setup menu is displayed and the active functions are shown.

### Info

- If no button is pressed for 10 12 seconds, the settings are automatically saved. If no button is pressed for 20 seconds, or if an impulse comes from the wheel speed sensor, the settings are automatically saved and the setup menu is closed.
- - The selected function flashes.

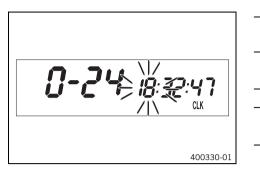

### Activating the function

- Press the button +.
  - The symbol continues to appear in the display and the next function appears.

### **Deactivating a function**

- Press the button —.
  - The symbol disappears in the display and the next function appears.

### 7.5 Setting the clock

### Condition

The motorcycle is stationary.

- Press the button  $\pm$  for 2–3 seconds.
  - ✓ The hour display flashes.
- - ✓ The next segment of the display flashes and can be set.
- You can set the following segments in the same way as the hours by pressing the button + and the button -.

### Info

The seconds can only be set to zero. If no button is pressed for 15 - 20 seconds, or if an impulse comes from the wheel speed sensor, the settings are automatically saved and the setup menu is closed.

### 7.6 Viewing the lap time

### • Info

This function can only be opened if lap times have actually been timed.

#### Condition

The motorcycle is stationary.

- Briefly press the button +.
  - ✓ LAP 1 appears on the left side of the display.
- The laps 1 10 can be viewed with the button -.
- Press and hold the button  $\pm$  for 3 5 seconds.
- The lap times are deleted.
- Briefly press the button  $\pm$ .
  - Next display mode

### • Info

When a signal from the wheel speed sensor arrives, the left side of the display changes back to the **SPEED** mode.

### 7.7 Display mode SPEED (speed)

The current speed is displayed in the **SPEED** display mode. The current speed can be displayed in **Km/h** or **Mph**.

### Info

Make the setting according to the country. When an impulse comes from the front wheel, the left side of the display changes to the **SPEED** mode and the current

### 7.8 Display mode SPEED/H (operating hours)

Condition

• The motorcycle is stationary.

speed is shown.

In display mode  ${\bf H},$  the service hours of the engine are displayed. The service hour counter stores the total traveling time.

### Info

The service hour counter is necessary for ensuring that service work is carried out at the right intervals. If the combination instrument is in **H** display mode when starting off, it automatically changes to the **ODO** display mode.

The **H** display mode is suppressed during the journey.

Press the but- ton $+$ for 2–3 seconds.	The display changes to the setup menu for the combination instrument functions.
Briefly press the button +.	Next display mode
Press the but- ton for 2–3 seconds.	No function
Briefly press the button	No function

### 7.9 Setup menu

### Condition

- The motorcycle is stationary.
- Press the button  $\pm$  for 2–3 seconds.
- The Setup menu displays the active functions.

		TR1 TR2	A1 A2 S1 S2
Km/h Mph ODO LAP CLK H	Km/h Mph	ODO	LAP CLK H

### Info

Repeatedly press the button = briefly until the desired function is reached. If no button is pressed for 20 seconds, the settings are automatically saved.

Briefly press the button <b>+</b> .	Activates the flashing display and changes to the next display
Press the but- ton $+$ for 2–3 seconds.	No function
Briefly press the button —.	Deactivates the flashing display and changes to the next display
Press the but- ton $=$ for 2–3 seconds.	No function
Wait 3 - 5 seconds.	Changes to the next display without changes
Wait 10 - 12 seconds.	Setup menu starts, stores the settings, and changes to <b>H</b> or <b>0D0</b> .

### 7.10 Setting the unit of measurement

Condition

- The motorcycle is stationary.
- Press the button  $\pm$  for 2–3 seconds.

Repeatedly press the button H briefly until Km/h/Mph flashes.
 In measurement unit mode, you can change the unit of measurement.

### Info

If no button is pressed for 5 seconds, the settings are automatically saved.

Briefly press the button +.	Starts selection, activates <b>Km/h</b> display
Press the but- ton $\pm$ for 2–3 seconds.	No function
Briefly press the button .	Activates <b>Mph</b> display
Press the but- ton for 2–3 seconds.	No function
Wait 3 - 5 seconds.	Changes to the next display, changes from selection to the Setup menu
Wait 10 - 12 seconds.	Stores and closes the Setup menu

### 7.11 Display mode SPEED/CLK (time)

SPEED	<b>58</b> Km/h	12:08:54
		400319-01

The time is shown in display mode **CLK**.

Press the but- ton $+$ for 2–3 seconds.	The display changes to the Setup menu of the clock.
Briefly press the button +.	Next display mode
Press the but- ton for $2-3$ seconds.	No function
Briefly press the button —.	No function

### 7.12 Setting the clock

# SPEED **58** Km/h **12:08:54** CLK 400319-01

### Condition

- The motorcycle is stationary.
- Press the button  $\pm$  for 2–3 seconds.

Press the but- ton $+$ for 2–3 seconds.	Increases the value
Briefly press the button $+$ .	Increases the value
Press the but- ton for 2–3 seconds.	Reduces the value
Briefly press the button —.	Reduces the value
Wait 3 - 5 seconds.	Changes to the next value
Wait 10 - 12 seconds.	Closes the SETUP menu

### 7.13 Display mode SPEED/LAP (lap time)

In the  $\ensuremath{\textbf{LAP}}$  display mode, up to 10 lap times can be timed with the stop watch.

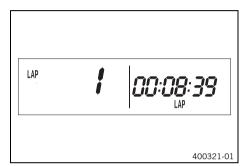

### • Info

If the lap time continues running after the button — is pressed, 9 memory locations are occupied. Lap 10 must be timed using the button +.

## **7 COMBINATION INSTRUMENT**

Press the but- ton $\pm$ for 2–3 seconds.	The stop watch and the lap time are reset.
Briefly press the button +.	Next display mode
Press the but- ton $=$ for 2–3 seconds.	Stops the clock.
Briefly press the button —.	Starts the stop watch or stop the current lap time measurement, stores it and the stop watch starts the next lap.

### 7.14 Viewing the lap time

### Condition

- The motorcycle is stationary.
- Briefly press the button +.

Press the but- ton $+$ for 2–3 seconds.	The stop watch and the lap time are reset.
Briefly press the button +.	Select a lap from 1–10
Press the but- ton for 2–3 seconds.	No function
Briefly press the button —.	View the next lap time.

### 7.15 Display mode SPEED/0D0 (odometer)

 Repeatedly press the button + briefly until **ODO** appears at the bottom right of the display.

The total traveled distance is shown in display mode **ODO**.

Press the but- ton $\neq$ for 2–3 seconds.	No function
Briefly press the button +.	Next display mode
Press the but- ton for 2–3 seconds.	No function
Briefly press the button —.	No function

### 7.16 Display mode SPEED/TR1 (trip master 1)

SPEED	<b>55</b> <sub>Km/h</sub>	<sup>TR1</sup> <i>129.3</i>
		400323-01

**TR1** (trip master 1) runs constantly and counts up to 999.9. You can use it to measure trips or the distance between refueling stops.

TR1 is coupled with A1 (average speed 1) and S1 (stop watch 1).

If 999.9 is exceeded, the values of **TR1**, **A1** and **S1** are automatically reset to 0.0.

Press the but- ton $+$ for 2–3 seconds.	Displays of TR1, A1 and S1 are reset to 0,0.
Briefly press the button +.	Next display mode
Press the but- ton for 2–3 seconds.	No function
Briefly press the button	No function

### 7.17 Display mode SPEED/TR2 (trip master 2)

TR2 (trip master 2) runs constantly and counts up to 999.9.

Press the but- ton $+$ for 2–3 seconds.	Clears the values <b>TR2</b> and <b>A2</b> .
Briefly press the button +.	Next display mode
Press the but- ton for $2-3$ seconds.	Reduces value of <b>TR2</b> .
Briefly press the button	Reduces value of <b>TR2</b> .

### 7.18 Setting TR2 (trip master 2)

#### Condition

- The motorcycle is stationary.
- Press the button for 2–3 seconds until TR2 flashes.

The displayed value can be set manually with the button  $\blacksquare$  and the button  $\blacksquare$ . This is a very practical function when riding using the road book.

### Info

The **TR2** value can also be corrected manually during the journey with the button + and the button -. If 999.9 is exceeded, the value of **TR2** is automatically reset to 0.0.

Press the but- ton $+$ for 2–3 seconds.	Increases value of TR2.
seconus.	
Briefly press the button ₩.	Increases value of TR2.
Press the but- ton for 2–3 seconds.	Reduces value of <b>TR2</b> .
Briefly press the button .	Reduces value of <b>TR2</b> .
Wait 10 - 12 seconds.	Stores and closes the Setup menu.

### 7.19 Display mode SPEED/A1 (average speed 1)

**A1** (average speed 1) shows the average speed calculated using **TR1** (trip master 1) and **S1** (stop watch 1).

The calculation of this value is activated by the first impulse of the wheel speed sensor and ends 3 seconds after the last impulse.

Press the but- ton $+$ for 2–3 seconds.	Displays of <b>TR1</b> , <b>A1</b> and <b>S1</b> are reset to 0,0.
Briefly press the button +.	Next display mode
Press the but- ton for 2–3 seconds.	No function
Briefly press the button .	No function

### 7.20 Display mode SPEED/A2 (average speed 2)

### Repeatedly press the button + briefly until A2 appears at the top right of the display.

**A2** (average speed 2) shows the average speed on the basis of the current speed if the stop watch **S2** (stop watch 2) is running.

#### Info

The displayed value can differ from the actual average speed if **S2** was not stopped after the ride.

Briefly press the button $+$ .	Next display mode
Press the but- ton $+$ for 2–3 seconds.	No function
Press the but- ton for 2–3 seconds.	No function
Briefly press the button —.	No function

## 7.21 Display mode SPEED/S1 (stop watch 1)

		N
SPEED	Km/h	<i>00: 18:52</i>
		400327-0

**S1** (Stop watch 1) shows the riding time based on **TR1** and continues running as soon as an impulse arrives from the wheel speed sensor.

The calculation of this value starts with the first impulse from the wheel speed sensor and ends 3 seconds after the last impulse.

Press the but- ton $\pm$ for 2–3 seconds.	Displays of <b>TR1</b> , <b>A1</b> and <b>S1</b> are reset to 0,0.
Briefly press the button +.	Next display mode
Press the but- ton for 2–3 seconds.	No function
Briefly press the button —.	No function

## 7.22 Display mode SPEED/S2 (stop watch 2)

- Repeatedly press the button + briefly until S2 appears at the top right of the display.
- **S2** (Stop watch 2) is a manual stop watch.
- If **S2** is running in the background, the display **S2** flashes.

Press the but- ton $+$ for 2–3 seconds.	The displays of <b>S2</b> and <b>A2</b> are set to 0,0.
Briefly press the button <b>+</b> .	Next display mode
Press the but- ton for 2–3 seconds.	No function
Briefly press the button .	Starts or stops <b>S2</b> .

7.23 Table of functions

## 8.1 Advice on first use

## Danger

- **Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.
- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

## Warning

**Risk of injury** Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

**Danger of crashing** Different tire tread patterns on the front and rear wheel impair the handling characteristic.

Different tire tread patterns can make the vehicle significantly more difficult to control.

Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

### Warning

Danger of accidents An unadapted riding style impairs the handling characteristic.

- Adapt your riding speed to the road conditions and your riding ability.

## Warning

Danger of accidents The vehicle is not designed to carry passengers.

Do not ride with a passenger.

## Warning

**Danger of accidents** The brake system fails in the event of overheating.

If the foot brake lever is not released, the brake linings drag continuously.

- Take your foot off the foot brake lever when you are not braking.

## Warning

Danger of accidents Total weight and axle loads influence the handling characteristic.

- Do not exceed the maximum permissible overall weight or the axle loads.

## Warning

**Risk of misappropriation** People who act without authorization endanger themselves and others.

- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.

### • Info

When using your motorcycle, remember that others may feel disturbed by excessive noise.

Make sure that the pre-delivery inspection work has been carried out by an authorized KTM workshop.

- $\checkmark$  You receive a delivery certificate and the Service and Warranty Booklet at vehicle handover.
- Before your first trip, read the entire Owner's Manual carefully.
- Get to know the controls.

## (All EXC models)

## (250 XC-W TPI US)

- Adjust the basic position of the hand brake lever. (
  P. 100)
- Adjust the basic position of the shift lever.

   (Image: Participation of the shift lever.
   (Image: Participation of the shift lever.
   (Ima
- Get used to handling the motorcycle on a suitable surface before undertaking a more challenging trip.

### Info

When off road, it is recommended that you are accompanied by another person on another vehicle so that you can help each other.

- Try also to ride as slowly as possible and in a standing position to get a better feeling for the motorcycle.
- Do not make any off-road trips that exceed your ability and experience.
- Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.
- If you carry luggage, make sure you secure it firmly as close as possible to the center of the vehicle and ensure even weight distribution between the front and rear wheels.

# Info

Motorcycles react sensitively to any changes of weight distribution.

The maximum permissible overall weight and the maximum permissible axle loads must not be exceeded.
 Guideline

Maximum permissible overall weight	335 kg (739 lb.)
Maximum permissible front axle load (All 250 mod- els)	148 kg (326 lb.)
Maximum permissible front axle load (All 300 mod- els)	147 kg (324 lb.)
Maximum permissible rear axle load	190 kg (419 lb.)

## Info

The spoke tension must be checked after half an hour of operation.

- Run the engine in. (🕮 p. 39)

## 8.2 Running in the engine

- During the running-in phase, do not exceed the specified engine performance.

Gu	ide	line
uu	IUC	IIIIC

Maximum engine performance		
During the first 3 operating hours <70 %		
During the first 5 operating hours	< 100 %	

Avoid fully opening the throttle!

Check the idle speed regularly.

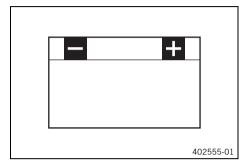

Guideline

• Info

The idle speed may change during the run-in time.

- » If the idle speed changes:
  - Adjust the idle speed. A (I p. 136)

### 8.3 Starting power of lithium-ion batteries at low temperatures

Lithium-ion batteries are far lighter than lead batteries, have a low self-discharge rate, and have more starting power at temperatures over 15 °C (60 °F). At low temperatures, however, the starting power of lithium-ion batteries drops to below that of lead batteries.

Multiple starting attempts may be needed. Press the electric starter button for 5 seconds, and wait 30 seconds between attempts. The pauses are necessary so that the created heat can distribute through the lithium-ion battery and the battery is not damaged.

If the charged lithium-ion battery does not or only weakly turns over the electric starter when temperatures are below 15 °C (60 °F), then the battery is not faulty, but needs to be warmed up internally to increase its starting power (current output). The starting power increases as the battery warms up.

### 8.4 Preparing the vehicle for difficult riding conditions

## • Info

Use of the vehicle under difficult conditions, such as on sand or on wet and muddy surfaces, can lead to considerably more rapid wear of components such as the drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

– Seal the air filter box. 🔌 (🕮 p. 83)

– Clean the air filter and air filter box. 🔌 (🕮 p. 82)

# • Info

Check the air filter approx. every 30 minutes.

- Check the electrical connector for humidity and corrosion and to ensure it is firmly seated.

- » If humidity, corrosion, or damage is found:
  - Clean and dry the connector, or change it if necessary.

### Difficult riding conditions are:

- Rides on dry sand. (🕮 p. 41)
- Rides on wet sand. (🕮 p. 42)
- Rides on wet and muddy circuits. (
  p. 43)
- Rides at high temperatures or slow riding. (
  p. 43)

## 8.5 Preparing vehicle for rides on dry sand

Check the radiator cap.

Value on the radiator cap 1.8 bar (26 psi)

» If the indicated value does not correspond to the setpoint value:

# Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.
- Change the radiator cap.
- Mount a dust cover on the air filter.

Dust cover for air filter (79006920000)

win

M01105-01

## Info See the KTM PowerParts fitting instructions.

See the **KIM FUWEIFalls** fitting instructions

Sand cover for air filter (79006922000)

i

## Info

See the **KTM PowerParts** fitting instructions.

# 8 PREPARING FOR USE

- Clean the chain.

Chain cleaner (🕮 p. 164)

- Mount the steel sprocket.
- Grease the chain.

Universal oil spray (🕮 p. 165)

- Clean the radiator fins.
- Straighten bent radiator fins carefully.

Condition

Regular use in sand

- Change the piston every 10 operating hours.

## 8.6 Preparing vehicle for rides on wet sand

## Check the radiator cap.

Value on the radiator cap	1.8 bar (26 psi)
---------------------------	------------------

» If the indicated value does not correspond to the setpoint value:

## Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.
- Change the radiator cap.

Fit a rain cover on the air filter.

Waterproofing device for air filter (79006921000)

## Info

See the KTM PowerParts fitting instructions.

Clean the chain.

Chain cleaner (🕮 p. 164)

- Mount the steel sprocket.
- Grease the chain.

Universal oil spray (🕮 p. 165)

- Clean the radiator fins.
- Straighten bent radiator fins carefully.

Condition

Regular use in sand

- Change the piston every 10 operating hours.

## 8.7 Preparing vehicle for rides on wet and muddy circuits

Fit a rain cover on the air filter.

Waterproofing device for air filter (79006921000)

• Info See the KTM PowerParts fitting instructions.

- Mount the steel sprocket.
- Clean the motorcycle. (
   p. 146)
- Straighten bent radiator fins carefully.

## 8.8 Preparing vehicle for high temperatures or slow riding

600868-01

· Check the radiator cap.

Value on the radiator cap	1.8 bar (26 psi)
---------------------------	------------------

» If the indicated value does not correspond to the setpoint value:

## Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.
- Change the radiator cap.
- Adjust the secondary drive to the road conditions.

### Info

- The transmission oil heats up quickly when the clutch is operated frequently due to an excessively high secondary drive.
- Clean the chain.

Chain cleaner (🕮 p. 164)

- Clean the radiator fins.
- Straighten bent radiator fins carefully.
- Check the coolant level. (🕮 p. 130)

## 8.9 Preparing vehicle for low temperatures or snow

- Fit a rain cover on the air filter.

Waterproofing device for air filter (79006921000)

## • Info

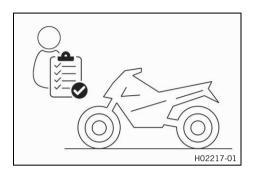

See the **KTM PowerParts** fitting instructions.

### 9.1 Checks and maintenance measures when preparing for use

## Info

Before every trip, check the condition of the vehicle and ensure that it is safe to operate. The vehicle must be in perfect technical condition when it is being operated.

\_

Check the gear oil level. (🕮 p. 143)

- Check the electrical system.
- Check the front brake fluid level. (
  p. 101)
- Check the rear brake fluid level. (
  P. 106)
- Check the brake linings of the rear brake. (🕮 p. 108)
- Check that the brake system is functioning properly.

- Check the chain, rear sprocket, motor sprocket, and chain guide. (興 p. 91)
- Check the chain tension. (🕮 p. 90)
- Check the tire air pressure. (
   p. 115)

## Info

The spoke tension must be checked regularly as incorrect spoke tension will strongly impair riding safety.

- Clean the dust boots of the fork legs. (🕮 p. 67)
- Bleed the fork legs. (🕮 p. 66)
- Check the air filter.
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check all screws, nuts, and hose clamps regularly for tightness.
- Check the fuel level.
- Check 2-stroke oil level. (🕮 p. 141)

## 9.2 Starting the vehicle

### Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

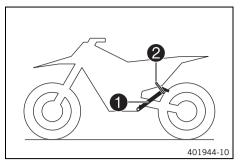

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

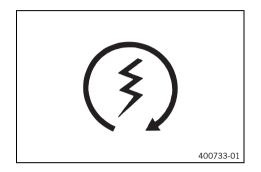

## Note

**Engine damage** High revving speed with a cold engine negatively impacts the lifespan of the engine.

- Always run the engine warm at a low speed.

# **9 RIDING INSTRUCTIONS**

- Take the motorcycle off side stand **1** and secure the side stand with rubber band **2**.
- Shift gear to neutral.

### Condition

Ambient temperature: < 20 °C (< 68 °F)

- Pull the cold start button fully out and turn it by a 1/4 turn.

# If the engine is warm, the cold start button must be deactivated.

Press the electric starter button or push the kick starter robustly through its full range.

## • Info

Do not open the throttle. Press the electric starter button for a maximum of 5 seconds. Wait for 30 seconds before a further attempt at starting. At temperatures below 15 °C (60 °F), several attempts at starting may be necessary to warm-up the lithium-ion battery and thereby increase the starting power. During the starting process, the malfunction indicator lamp lights up.

## 9.3 Starting off

## • Info

Switch on the light before riding the vehicle. You will be seen earlier by other motorists. While riding, the side stand must be folded up and secured with the rubber band.

 Pull the clutch lever, shift into first gear, release the clutch lever slowly and at the same time open the throttle gently.

## 9.4 Shifting, riding

## Warning

**Danger of accidents** If you change down at high engine speed, the rear wheel blocks and the engine races.

- Do not change into a low gear at high engine speed.

## Warning

Engine failure The engine will not be lubricated unless there is 2-stroke oil in the oil tank.

- If the oil level warning light lights up, the 2-stroke oil is sufficient for the remaining tank of fuel.
- As soon as the oil level warning light lights up, ride for no longer than until the remaining fuel in the tank is depleted.
- At the next opportunity add 2-stroke oil before you refuel.
- Time the oil pump if the 2-stroke oil hose has been removed or the 2-stroke oil tank has been fully depleted in error.

### Info

If you hear unusual noises while riding, stop immediately, switch off the engine, and contact an authorized KTM workshop.

First gear is used for starting off and for steep inclines.

- Shift into a higher gear when conditions allow (incline, road situation, etc.). To do so, release the throttle
  while simultaneously pulling the clutch lever, shift into the next gear, release the clutch lever and open the
  throttle.
- If the cold start function was activated, deactivate the cold start button after the engine has warmed up.
- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is <sup>3</sup>/<sub>4</sub> open. This will barely reduce the speed but fuel consumption will be considerably lower.
- Always open the throttle only as much as the engine can handle abrupt throttle opening increases fuel consumption.
- To shift down, apply the brakes and close the throttle at the same time.
- Pull the clutch lever and shift into a lower gear, release the clutch lever slowly, and either open the throttle or shift again.
- Switch off the engine if running at idle or stationary for a long time.

## Guideline ≥ 2 min

- Avoid frequent and longer slipping of the clutch. As a result the gear oil, engine and cooling system heat up.

- Ride at a low engine speed instead of at a high engine speed with a slipping clutch.

### 9.5 Braking

## Warning

- Danger of accidents Excessively forceful application of the brakes blocks the wheels.
- Adjust application of the brakes to the respective riding situation and riding surface conditions.

## Warning

**Danger of accidents** A spongy pressure point on the front or rear brake reduces braking efficiency.

- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

## Warning

**Danger of accidents** Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- On sandy, wet or slippery surfaces, use the rear brake.

 Braking should always be completed before you go into a bend. Change down to a lower gear appropriate to your road speed.

## 9.6 Stopping, parking

### Warning

Risk of misappropriation People who act without authorization endanger themselves and others.

- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.

## Warning

**Danger of burns** Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

## Note

Material damage The vehicle may be damaged by incorrect procedure when parking.

Significant damage may be caused if the vehicle rolls away or falls over. The components for parking the vehicle are designed only for the weight of the vehicle.

- Park the vehicle on a firm and level surface.
- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.

### Note

Fire hazard Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.
- Apply the brakes on the motorcycle.
- Shift gear to neutral.

### (All EXC models)

– Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.

### (250 XC-W TPI US)

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Park the motorcycle on firm ground.

## 9.7 Transporting

### Note

Danger of damage The parked vehicle can roll away or fall over.

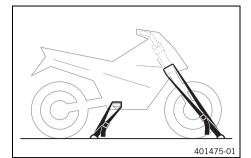

- Park the vehicle on a firm and level surface.

### Note

Fire hazard Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

# **9 RIDING INSTRUCTIONS**

- Switch off the engine.
- Use tension belts or other suitable devices to secure the motorcycle against falling over or rolling away.

## 9.8 Refueling

## Danger

**Fire hazard** Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

## Warning

Danger of poisoning Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

## Note

**Material damage** Inadequate fuel quality causes the fuel filter to quickly become clogged.

In some countries and regions, the available fuel quality and cleanliness may not be sufficient. This will result in problems with the fuel system.

 Refuel only with clean fuel that meets the specified standards. (Your authorized KTM workshop will be glad to help.)

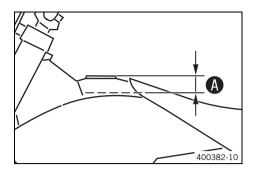

## Warning

Environmental hazard Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

- Open the filler cap. (🕮 p. 20)

# **9 RIDING INSTRUCTIONS**

Fill the fuel tank with fuel up to level **(A)**.

Guideline

Level	35 mm	n (1.38 in)
Total fuel tank capacity, approx.	9   (2.4 US gal)	Super unleaded (ROZ 95/RON 95/PON 91) (  p. 163)

Info

Do not refuel using pre-mixed fuel.

Close the filler cap. (🕮 p. 21)

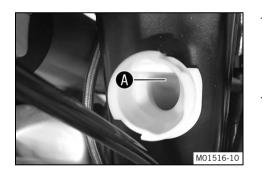

## 9.9 Adding 2-stroke oil

## Warning

**Engine failure** The engine will not be lubricated unless there is 2-stroke oil in the oil tank. If the oil level warning light lights up, the 2-stroke oil is sufficient for the remaining tank of fuel.

- As soon as the oil level warning light lights up, ride for no longer than until the remaining fuel in the tank is depleted.
- At the next opportunity add 2-stroke oil before you refuel.
- Time the oil pump if the 2-stroke oil hose has been removed or the 2-stroke oil tank has been fully depleted in error.

- Open 2-stroke oil tank cap. (🕮 p. 21)
- Fill the 2-stroke oil tank up to the lower edge (A) of the filler neck.

2-stroke oil tank con-	0.7 l (0.7 qt.)	Engine oil, 2-stroke
tent approx.		(🕮 p. 163)

· Close 2-stroke oil tank cap. (🕮 p. 21)

## 10.1 Additional information

## 11.1 Checking the basic chassis setting with the rider's weight

## • Info

When adjusting the basic chassis setting, first adjust the shock absorber and then the fork.

- For optimal motorcycle riding characteristics and to avoid damage to forks, shock absorbers, swingarm and frame, the basic settings of the suspension components must match the rider's weight.
- As delivered, KTM offroad motorcycles are adjusted for a standard rider weight (with full protective clothing).

### Guideline

St	tandard rider weight	75 85 kg (165
		187 lb.)

- If the rider's weight is above or below the standard range, the basic setting of the suspension components must be adjusted accordingly.
- Small weight differences can be compensated by adjusting the spring preload, but in the case of large weight differences, the springs must be replaced.

## 11.2 Compression damping of the shock absorber

The compression damping of the shock absorber is divided into two ranges: high-speed and low-speed. High-speed and low-speed refer to the compression speed of the rear wheel suspension and not to the vehicle speed.

The high-speed setting, for example, has an effect on the landing after a jump: the rear wheel suspension compresses quickly.

The low-speed setting, for example, has an effect when riding over long ground swells: the rear wheel suspension compresses slowly.

These two ranges can be adjusted separately, although the transition between high-speed and low-speed is gradual. Thus, changes in the high-speed range affect the compression damping in the low-speed range and vice versa.

### 11.3 Adjusting the low-speed compression damping of the shock absorber

### Caution

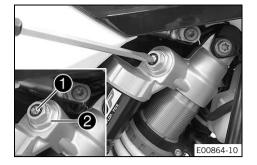

**Risk of injury** Parts of the shock absorber will fly off if the shock absorber is disassembled incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

## lnfo

The effect of the low-speed setting can be seen in slow to normal compression of the shock absorber.

# **11 TUNING THE CHASSIS**

- Turn adjusting screw 1 clockwise with a screwdriver as far as the last perceptible click.

## Info

Do not loosen fitting **2**!

- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

## Guideline

Compression damping, low-spe	eed
Comfort	18 clicks
Standard	15 clicks
Sport	12 clicks

### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

## 11.4 Adjusting the high-speed compression damping of the shock absorber

## Caution

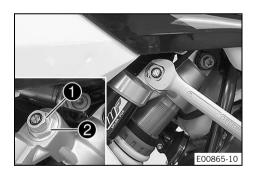

**Risk of injury** Parts of the shock absorber will fly off if the shock absorber is disassembled incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

### Info

The effect of the high-speed setting can be seen in fast compression of the shock absorber.

\_

- Using an open end wrench, turn adjusting screw 1 clockwise all the way.

Do not loosen fitting **2**!

Turn counterclockwise by the number of turns corresponding to the shock absorber type.

### Guideline

Compression damping, high-sp	beed
Comfort	2.5 turns
Standard	2 turns
Sport	1 turn

## Info

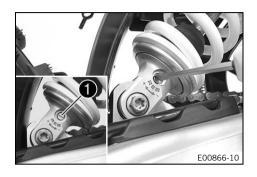

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

## 11.5 Adjusting the rebound damping of the shock absorber

## Caution

**Risk of injury** Parts of the shock absorber will fly off if the shock absorber is disassembled incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

- Turn adjusting screw ① clockwise up to the last perceptible click.
- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

Guideline

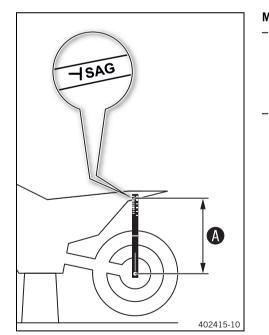

Rebound damping	
Comfort	18 clicks
Standard	15 clicks
Sport	12 clicks

## lnfo

## 11.6 Measuring the rear wheel dimension unloaded

### Preparatory work

\_

# Main work Position the sag gauge in the rear axle and measure t

Raise the motorcycle with a lift stand. (IP p. 66)

Position the sag gauge in the rear axle and measure the distance to marking **SAG** on the rear fender.

Sag gauge (00029090100)

Pin for sag gauge (00029990010)

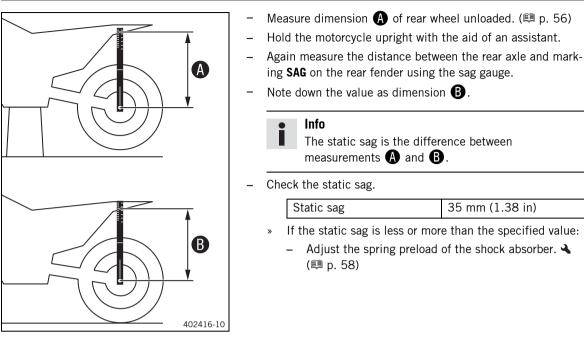

Note down the value as dimension (A).

### **Finishing work**

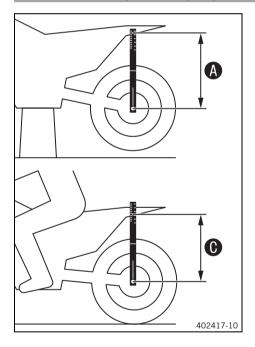

- Remove the motorcycle from the lift stand. (
p. 66)

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

## 11.7 Checking the static sag of the shock absorber

## 11.8 Checking the riding sag of the shock absorber

- Measure dimension 🚯 of rear wheel unloaded. (🕮 p. 56)
- With another person holding the motorcycle, the rider, wearing full protective clothing, sits on the seat in a normal sitting position (feet on footrests) and bounces up and down a few times.
  - ✓ The rear wheel suspension levels out.
- Another person again measures the distance between the rear axle and marking **SAG** on the rear fender using the sag gauge.
- Note down the value as dimension **()**.

The riding sag is the difference between measurements **(A)** and **(D)**.

- Check the riding sag.

Riding sag	110 mm (4.33 in)
------------	------------------

- » If the riding sag differs from the specified measurement:
  - Adjust the riding sag. 🔦 (🕮 p. 59)

## 11.9 Adjusting the spring preload of the shock absorber 🔌

## Caution

**Risk of injury** Parts of the shock absorber will fly off if the shock absorber is disassembled incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

## Info

Before changing the spring preload, make a note of the present setting, e.g., by measuring the length of the spring.

# 

### Preparatory work

- Raise the motorcycle with a lift stand. (🕮 p. 66)
- After removing the shock absorber, clean it thoroughly.

### Main work

- Loosen screw 🚺.
- Turn adjusting ring ② until the spring is no longer under tension.

Holding wrench (90129051000)

- Measure the overall spring length while the spring is not under tension.
- Tighten the spring by turning adjusting ring (2) to measurement (A).

## Guideline

Spring preload	
Comfort	8 mm (0.31 in)
Standard	8 mm (0.31 in)
Sport	8 mm (0.31 in)

### lnfo

## Tighten screw 🚺.

### Guideline

Screw, shock	M5	5 Nm (3.7 lbf ft)
absorber adjusting		
ring		

### Finishing work

- Install the shock absorber. A (IP p. 79)
- Remove the motorcycle from the lift stand. (IP p. 66)

Depending on the static sag and/or the riding sag, it may be necessary to increase or decrease the spring pretension.

## 11.10 Adjusting the riding sag 🔧

### Preparatory work

- Raise the motorcycle with a lift stand. (
  p. 66)
- - After removing the shock absorber, clean it thoroughly.

### Main work

\_

B00292-10

Choose and mount a suitable spring.

### Guideline

Spring rate	
Weight of rider: 65	60 N/mm (343 lb/in)
75 kg (143 165 lb.)	
Weight of rider: 75	63 N/mm (360 lb/in)
85 kg (165 187 lb.)	
Weight of rider: 85	66 N/mm (377 lb/in)
95 kg (187 209 lb.)	

## Info

The spring rate is shown on the outside of the spring.

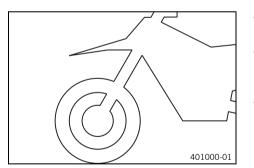

### **Finishing work**

- Install the shock absorber. ◀ (I p. 79)
- Remove the motorcycle from the lift stand. (19 p. 66)
- Check the static sag of the shock absorber. (
  p. 57)
- Check the riding sag of the shock absorber. (
  p. 57)

## 11.11 Checking the basic setting of the fork

### Info

For various reasons, no exact riding sag can be determined for the fork.

- As with the shock absorber, smaller differences in the rider's weight can be compensated by the spring preload.
- However, if the fork frequently bottoms out (hard end stop on compression), harder springs must be fitted to avoid damage to the fork and frame.
  - If the fork feels unusually hard after extended periods of operation, the fork legs need to be bled.

## 11.12 Adjusting the compression damping of the fork

## Info

The hydraulic compression damping determines the fork suspension behavior.

## (All standard EXC/XC-W models)

Turn white adjusting screw ① clockwise as far as it will go.

• Info

Adjusting screw **1** is located at the upper end of the left fork leg. The compression damping is located in left fork

leg **COMP** (white adjusting screw). The rebound damping is located in right fork leg **REB** (red adjusting screw).

Turn counterclockwise by the number of clicks corresponding to the fork type.

Guideline

Compression damping	
Comfort	18 clicks
Standard	15 clicks
Sport	12 clicks

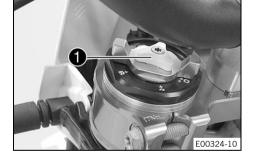

# • Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

### (All Six Days models)

Turn white adjusting screw ① clockwise as far as it will go.

## Info

Adjusting screw **1** is located at the upper end of the left fork leg.

The compression damping is located in left fork leg **COM** (white adjusting screw). The rebound damping is located in right fork leg **REB** (red adjusting screw).

 Turn counterclockwise by the number of clicks corresponding to the fork type.

Guideline

Compression damping	
Comfort	18 clicks
Standard	15 clicks
Sport	12 clicks

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

## 11.13 Adjusting the rebound damping of the fork

## Info

The hydraulic rebound damping determines the fork suspension behavior.

### (All standard EXC/XC-W models)

- Turn red adjusting screw ① clockwise as far as it will go.

## Info

Adjusting screw **1** is located at the upper end of the right fork leg.

The rebound damping is located in right fork leg **REB** (red adjusting screw). The compression damping is located in left fork leg **COMP** (white adjusting screw).

 Turn counterclockwise by the number of clicks corresponding to the fork type.

## Guideline

Rebound damping	
Comfort	18 clicks
Standard	15 clicks
Sport	12 clicks

## Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

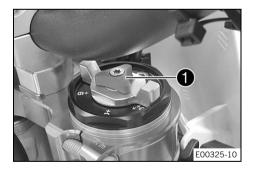

- Turn red adjusting screw ① clockwise as far as it will go.

## Info

Adjusting screw ① is located at the upper end of the right fork leg. The rebound damping is located in right fork

leg **REB** (red adjusting screw). The compression damping is located in left fork leg **COM** (white adjusting screw).

 Turn counterclockwise by the number of clicks corresponding to the fork type.

# **11 TUNING THE CHASSIS**

Guideline

Rebound damping	
Comfort	18 clicks
Standard	15 clicks
Sport	12 clicks

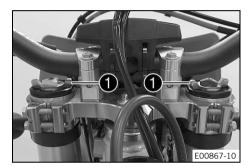

## Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

### 11.14 Adjusting the spring preload of the fork (All Six Days models)

### **Preparatory work**

- Raise the motorcycle with a lift stand. (
p. 66)

## Main work

- Turn the adjusting wings 1 counterclockwise all the way.
  - ✓ The marking +0 aligns with the adjusting wing on both fork legs.

### Info

- Make the adjustment by hand only. Do not use a tool. Make the same adjustment on both fork legs.
- Turn the adjusting wings clockwise.

### Guideline

Spring preload - Preload Adjuster	
Comfort	+0
Standard	+0
Sport	+3

The adjusting wings engage noticeably at the numerical values.

### Info

Adjust the spring preload to the numerical values only as the preload will not engage between the numerical values. Turn clockwise to increase the spring preload; turn

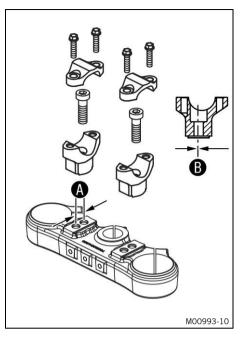

counterclockwise to reduce the spring preload. Adjusting the spring preload has no influence on the absorption setting of the rebound. Basically, however, you should set the rebound damp-

ing higher with a higher spring preload.

### **Finishing work**

- Remove the motorcycle from the lift stand. (IP p. 66)

## 11.15 Handlebar position

### (All standard EXC/XC-W models)

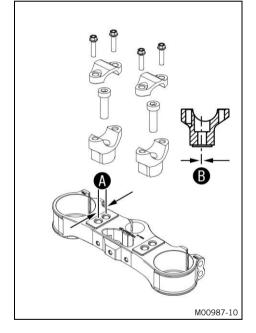

On the upper triple clamp, there are 2 holes at a distance of igA to each other.

Hole distance A	15 mm (0.59 in)
-----------------	-----------------

The holes on the handlebar support are placed at a distance of  $\ensuremath{\mathfrak{B}}$  from the center.

Hole distance B	3.5 mm (0.138 in)
-----------------	-------------------

The handlebar can be mounted in four different positions. This allows the handlebar to be mounted in the most comfortable position for the rider.

### (All Six Days models)

On the upper triple clamp, there are 2 holes at a distance of  $\mathbf{A}$  to each other.

	Hole distance A	15 mm (0.59 in)
The holes on the handlebar support are placed at a distance		

of <b>B</b> from the center.		
	Hole distance B	3.5 mm (0.138 in)

The handlebar can be mounted in four different positions. This allows the handlebar to be mounted in the most comfortable position for the rider.

## 11.16 Adjusting the handlebar position 🔦

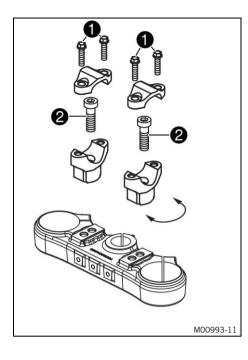

## Warning

Danger of accidents A repaired handlebar poses a safety risk.

If the handlebar is bent or straightened, the material becomes fatigued. The handlebar may break as a result.

- Change the handlebar if the handlebar is damaged or bent.

# **11 TUNING THE CHASSIS**

## (All standard EXC/XC-W models)

Remove screws ①. Take off the handlebar clamps.
 Remove the handlebar and lay it to one side.

## • Info

Cover the components to protect them against damage.

Do not kink the cables and lines.

- Remove screws **2**. Take off the handlebar supports.
- Place the handlebar supports in the required position.
   Mount and tighten screws 2.

Guideline

Screw, handle-	M10	40 Nm (29.5 lbf ft)

## 12.1 Raising the motorcycle with a lift stand

### Note

**Danger of damage** The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

Raise the motorcycle at the frame underneath the engine.

## Lift stand (78129955100)

✓ Neither wheel is in contact with the ground.

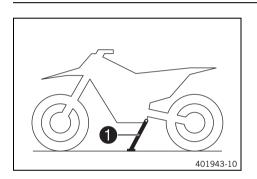

- Secure the motorcycle against falling over.

## 12.2 Removing the motorcycle from the lift stand

### Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

- Remove the motorcycle from the lift stand.
- Remove the lift stand.
- To park the motorcycle, press side stand 1 to the ground with your foot and lean the motorcycle on it.

### Info

When you are riding, the side stand must be folded up and secured with the rubber band.

## 12.3 Bleeding the fork legs

### **Preparatory work**

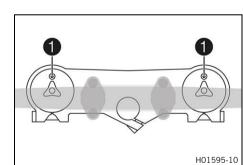

- Raise the motorcycle with a lift stand. (B) p. 66)

### Main work

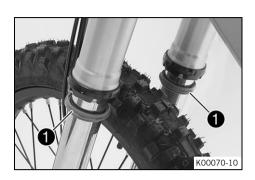

- Release bleeder screws 1.
  - $\checkmark$  Any excess pressure escapes from the interior of the fork.
  - Tighten the bleeder screws.

### **Finishing work**

- Remove the motorcycle from the lift stand. (19 p. 66)

## 12.4 Cleaning the dust boots of the fork legs

### Preparatory work

- Raise the motorcycle with a lift stand. (
  p. 66)
- Remove the fork protector. (EP p. 67)

### Main work

- Push dust boots 1 of both fork legs downward.

### Info

The dust boots remove dust and coarse dirt particles from the inside fork tubes. Over time, dirt can accumulate behind the dust boots. If this dirt is not removed, the oil seals behind can start to leak.

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.
- Clean and oil the dust boots and inner fork tubes of both fork legs.

Universal oil spray (🕮 p. 165)

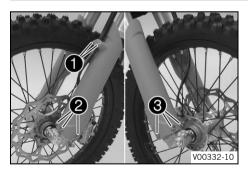

- Press the dust boots back into their installation position.
- Remove excess oil.

### **Finishing work**

\_

- Install the fork protector. (🕮 p. 68)

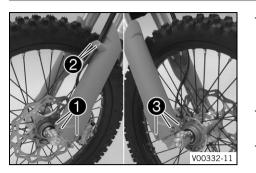

## 12.5 Removing the fork protector

- Remove screws **1** and take off the clamp.
- Remove screws **2** and take off the left fork protector.
  - Remove screws 🕄 and take off the right fork protector.

# **12 SERVICE WORK ON THE CHASSIS**

## 12.6 Installing the fork protector

- Position the fork protector on the left fork leg. Mount and tighten screws 1.

Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)

- Check the headlight setting. (
  p. 126)

### 12.13 Checking the play of the steering head bearing

## Warning

**Danger of accidents** Incorrect steering head bearing play impairs the handling characteristic and damages components.

- Correct incorrect steering head bearing play immediately. (Your authorized KTM workshop will be glad to help.)

### Info

If the vehicle is operated for a lengthy period with play in the steering head bearing, the bearings and the bearing seats in the frame can become damaged over time.

### **Preparatory work**

- Raise the motorcycle with a lift stand. (IP p. 66)

### Main work

H01167-01

• Move the handlebar to the straight-ahead position. Move the fork legs to and fro in the direction of travel.

Play should not be detectable on the steering head bearing.

» If there is detectable play:

– Adjust the steering head bearing play. 🔌 🕮 p. 77)

Move the handlebar to and fro over the entire steering range.

It must be possible to move the handlebar easily over the entire steering range. There should be no detectable detent positions.

- » If detent positions are detected:
  - Adjust the steering head bearing play. 🔌 (🕮 p. 77)

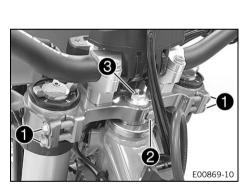

Check the steering head bearing and change if neces-\_ sary.

### **Finishing work**

Remove the motorcycle from the lift stand. (
p. 66) \_

### 12.14 Adjusting the steering head bearing play 🔌

### 12.16 Removing front fender

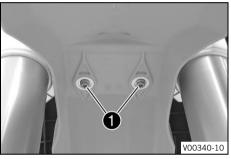

### Preparatory work

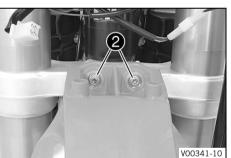

Remove screws 1.

Main work

\_

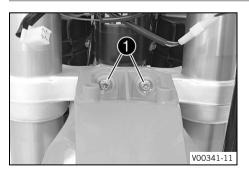

- Remove the headlight mask with the headlight. (
p. 123)

- Remove screws 2. Take off front fender.

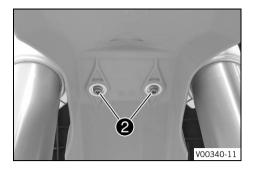

12.17 Installing front fender

### Main work

Position front fender. Mount and tighten screws ①.
 Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

Mount and tighten screws 2.
 Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
------------------------------	----	--------------------

### **Finishing work**

- Install the headlight mask with the headlight. (
  p. 124)
- Check the headlight setting. (🕮 p. 126)

### 12.18 Removing the shock absorber 🔧

### **Preparatory work**

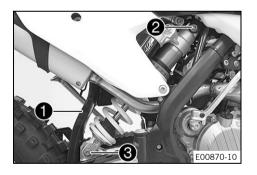

### - Raise the motorcycle with a lift stand. (IP p. 66)

### Main work

\_

- Remove screw **①** and lower the rear wheel with the swingarm as far as possible without blocking the rear wheel. Secure the rear wheel in this position.
- Remove screw **2**, push splash protector **3** to the side, and remove the shock absorber.

### 12.19 Installing the shock absorber 🔌

### Main work

Push splash protector 1 to the side and position the shock absorber. Mount and tighten screw 2.

Guideline

Screw, top	M12	80 Nm (59 lbf ft)
shock absorber		Loctite <sup>®</sup> 2701™

- Mount and tighten screw **3**.

Guideline

Screw, bottom	M12	80 Nm (59 lbf ft)
shock absorber		Loctite <sup>®</sup> 2701™

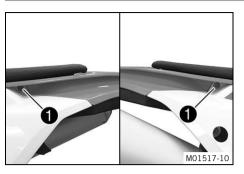

## • Info

The heim joint for the shock absorber at the swingarm is Teflon-coated. It must not be greased with grease or with other lubricants. Lubricants dissolve the Teflon coating, thereby drastically reducing the service life.

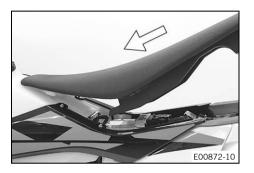

### **Finishing work**

- Remove the motorcycle from the lift stand. (
p. 66)

### 12.20 Removing the seat

### 12.21 Mounting the seat

Remove screws 1.

\_

Raise the rear of the seat, pull the seat back, and lift it off.

- Hook in the front of the seat on the collar bushing of the fuel tank, lower it at the rear and push it forward.
- Make sure that the seat is correctly locked in.

- 1 M01517-10
- 12.22 Removing the air filter box cover

## Mount and tighten screws **①**.

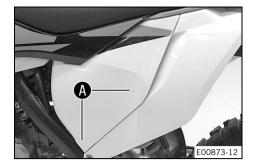

Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
------------------------------	----	--------------------

### Condition

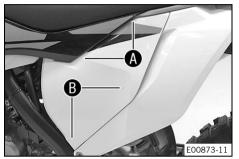

The air filter box cover is secured.

- Remove screw 1.

Pull off the air filter box cover in area (A) sideways and take off toward the front.

### 12.23 Installing the air filter box cover

Insert the air filter box cover in the area (A) and clip it into the area (B).

Condition
-----------

The air filter box cover is secured.

Mount and tighten screw ①.
 Guideline

Screw, air filter box	EJOT PT®	3 Nm (2.2 lbf ft)
cover	K60x20-Z	

### 12.24 Removing the air filter 🔧

### Note

Engine damage Unfiltered intake air has a negative effect on the service life of the engine.

Dust and dirt will enter the engine without an air filter.

- Never start to use the vehicle without an air filter.

### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### **Preparatory work**

- Remove the air filter box cover. (🕮 p. 80)

### 12.25 Installing the air filter 🔌

### Main work

- Detach retaining tab **①**. Remove air filter with air filter support.
- Remove air filter from air filter support.

### Main work

Mount the clean air filter on the air filter support.

Grease the air filter in area A Long-life grease (📖 p. 164) H02459-01 Insert air filter and position retaining pin **1** in bushing **B**. ✓ The air filter is correctly positioned. 1 Insert retaining tab **2**.  $\checkmark$  Retaining pin **3** is secured with retaining tab **2**. Info If the air filter is not mounted correctly, dust and dirt may enter the engine and result in damage. E00877-10

### **Finishing work**

Install the air filter box cover. (I p. 81)

### Cleaning the air filter and air filter box 🔦 12.26

### Warning

Environmental hazard Hazardous substances cause environmental damage.

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### Info

Do not clean the air filter with fuel or petroleum since these substances attack the foam.

### **Preparatory work**

- Remove the air filter box cover. (
  P. 80)
- Remove the air filter. 🔌 (🕮 p. 81)

### Main work

 Wash the air filter thoroughly in special cleaning liquid and allow it to dry properly.

Air filter cleaner (🕮 p. 164)

## • Info

Only squeeze the air filter to dry it; never wring it out.

- Oil the dry air filter with a high quality filter oil.

Oil for foam air filter (🕮 p. 164)

- Clean the air filter box.
- Clean the intake flange and check it for damage and tightness.

### **Finishing work**

- Install the air filter. 🔌 (🕮 p. 82)
- Install the air filter box cover. (🕮 p. 81)

### 12.27 Preparing air filter box cover for securing 🔌

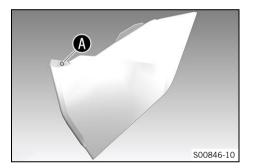

### **Preparatory work**

- Remove the air filter box cover. (🕮 p. 80)

### Main work

\_

Drill a hole at marking **(A**).

## Guideline

	D	Diameter	6 mm (0.24 in)
--	---	----------	----------------

### **Finishing work**

- Install the air filter box cover. (
p. 81)

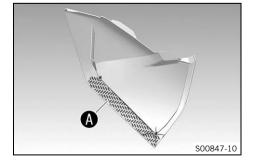

### 12.28 Sealing the air filter box 🔧

### **Preparatory work**

- Remove the air filter box cover. (🕮 p. 80)

### Main work

- Seal the air filter box in the marked area (A).

### **Finishing work**

- Install the air filter box cover. (🕮 p. 81)

### 9 Removing the main silencer

### Warning

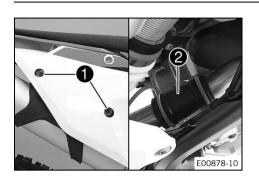

\_

Danger of burns The exhaust system gets very hot when the vehicle is driven.

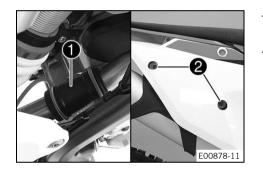

Allow the exhaust system to cool down before performing any work on the vehicle.

Remove screws 1.

spring ring from the manifold.

12.30 Installing the main silencer

- Mount the main silencer with the rubber sleeve 1 and spring ring.

Pull off the main silencer at the rubber sleeve **2** and the

Mount and tighten screws **2**. Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

### 12.31 Changing the glass fiber yarn filling in the main silencer 🔌

### Warning

Danger of burns The exhaust system gets very hot when the vehicle is driven.

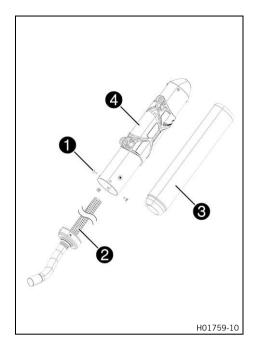

- Allow the exhaust system to cool down before performing any work on the vehicle.

### Info

Over time, the fibers of the glass fiber yarn escape and the damper "burns" out. Not only is the noise level higher, the performance characteristic changes.

### **Preparatory work**

- Remove the main silencer. (🕮 p. 84)

### Main work

- Remove screws 1.
  - Pull out inner tube 2.
- Remove the glass fiber yarn filling **3** from the inner tube.
- Clean the parts that need to be reinstalled and check for damage.
- Fit the new glass fiber yarn filling **3** into the inner tube.
- Position outer tube 
   over the inner tube with the new glass
   fiber yarn filling.
- Mount and tighten screws 1.

Guideline

Screws on the main	M5	7 Nm (5.2 lbf ft)
silencer		

### **Finishing work**

Install the main silencer. (🕮 p. 84)

### 12.32 Removing the fuel tank 🔦

## 1 Danger

**Fire hazard** Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

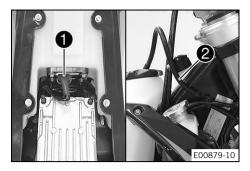

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

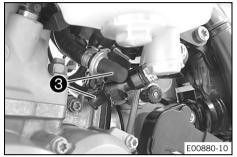

## Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

### Preparatory work

### Main work

- Unplug connector ① of the fuel pump.
- Remove tube 2 from the fuel tank breather.
- Thoroughly clean the plug-in connection of the fuel line using compressed air.

- Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line clogs the injection valve!
- Disconnect the plug-in connection of the fuel line.

Remaining fuel may flow out of the fuel hose.

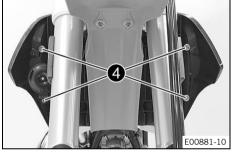

- Mount wash cap set 3.

Wash cap set (81212016100)

- Remove screws **4** with the collar bushings.

### (All EXC models)

- Hang the horn and horn bracket to one side.

Remove screw 🗿 with the rubber bushing.

Pull both spoilers off laterally from the radiator bracket and lift off the fuel tank.

## 12.33 Installing the fuel tank 🔌

## Danger

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

### Warning

Danger of poisoning Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

### Main work – Check throttle cable routing. (🕮 p. 94)

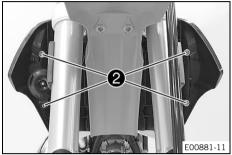

Position the fuel tank and fit the two spoilers to the sides in

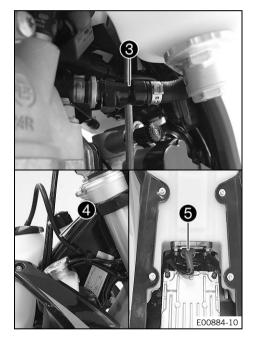

front of the radiator bracket.

 Make sure that no cables or throttle cables are trapped or damaged.

Mount and tighten screw 1 with the rubber bushing. Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

### (All EXC models)

- Position the horn with the horn bracket.
- Mount and tighten screws **2** with the collar bushings. Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

- Remove the wash cap set.
- Thoroughly clean the plug-in connection of the fuel line using compressed air.

### Info

- Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line clogs the injection valve!
- Lubricate the O-ring and connect plug-in connection 3 for the fuel line.

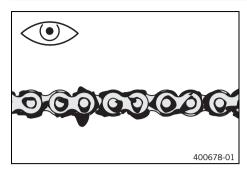

## Info

- Route the cable and fuel line at a safe distance from the exhaust system.
- Attach fuel tank breather hose 4.
- Plug in connector **5** for the fuel pump.

### **Finishing work**

– Mount the seat. (🕮 p. 80)

### 12.34 Checking the chain for dirt

- Check the chain for heavy soiling.
  - If the chain is very dirty:
  - Clean the chain. (🕮 p. 89)

### 12.35 Cleaning the chain

Warning

- **Danger of accidents** Oil or grease on the tires reduces the road grip.
- Remove the lubricant from the tires using a suitable cleaning agent.

### Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

### Warning

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### Info

The service life of the chain depends largely on its maintenance.

400725-01

### Preparatory work

- Raise the motorcycle with a lift stand. (
p. 66)

### Main work

- Rinse off loose dirt with a soft jet of water.
- Remove old grease residue with chain cleaner.

Chain cleaner (🕮 p. 164)

- After drying, apply chain spray.

Off-road chain spray (🕮 p. 164)

### Finishing work

- Remove the motorcycle from the lift stand. (IP p. 66)

### 12.36 Checking the chain tension

### Warning

Danger of accidents Incorrect chain tension damages components and results in accidents.

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.

If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.

- Set the chain tension in accordance with the specification.

### Preparatory work

- Raise the motorcycle with a lift stand. (🕮 p. 66)

### Main work

- Pull the chain at the end of the chain sliding piece upward to measure chain tension A.

### lnfo

The bottom chain section ① must be taut. When the chain guard is mounted, it must be possible to pull up the chain at least to the point where it makes contact with chain guard ③. Chain wear is not always even, so you should repeat this measurement at different chain positions.

Chain tension	55 58 mm (2.17
	2.28 in)

- If the chain tension does not meet specifications:
  - Adjust the chain tension. (
    p. 90)

### **Finishing work**

### 12.37 Adjusting the chain tension

### Warning

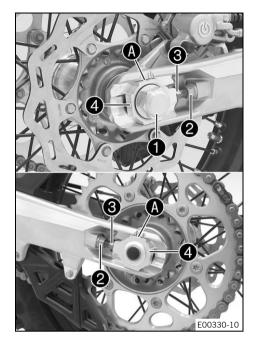

Danger of accidents Incorrect chain tension damages components and results in accidents.

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded. If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

### Preparatory work

- Check the chain tension. (🕮 p. 90)

000000000

### Main work

- Loosen nut 1.
- 🖞 Loosen nuts 2.
- Adjust the chain tension by turning adjusting screws ③ left and right.

Guideline

 Chain tension
 55 ... 58 mm (2.17 ...

 2.28 in)
 2.28 in)

 Turn adjusting screws (3) on the left and right so that the markings on the left and right chain adjusters are in the same position relative to reference marks (A). The rear wheel is then correctly aligned.

- Tighten nuts 2.
- Make sure that chain adjusters **4** are fitted correctly on adjusting screws **3**.
- Tighten nut 🕦.

Guideline

Nut, rear wheel spin-	M20x1.5	80 Nm (59 lbf ft)
dle		

### Info

The wide adjustment range of the chain adjusters (32 mm (1.18 in)) enables different secondary ratios with the same chain length. Chain adjusters 4 can be turned by 180°.

### **Finishing work**

- Remove the motorcycle from the lift stand. (
P. 66)

### 12.38 Checking the chain, rear sprocket, motor sprocket, and chain guide

400227-01

- Raise the motorcycle with a lift stand. (
p. 66)

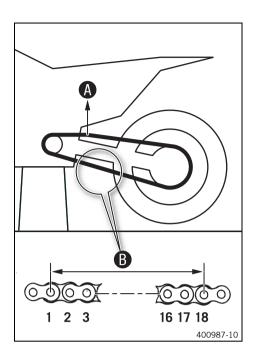

### Main work

- Shift the transmission to idle.
- Check the rear sprocket and motor sprocket for wear.
  - » If the rear sprocket and motor sprocket are worn:
    - Change the drivetrain kit. 🔌

### Info

The motor sprocket, rear sprocket, and chain should always be replaced together.

Pull at the top part of the chain with the specified weight (A). Guideline

Weight, chain wear measure-	10 15 kg (22 33 lb.)
ment	

Measure the distance **B** of 18 chain links in the lower chain section.

### lnfo

Chain wear is not always even, so you should repeat this measurement at different chain positions.

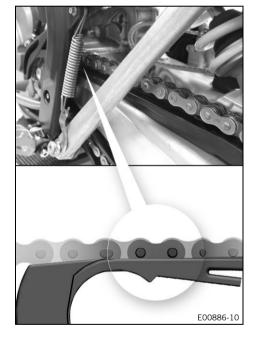

Maximum distance B at	272 mm (10.71 in)
the longest chain section	

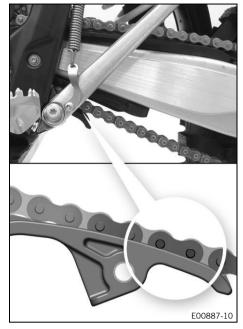

When the chain is replaced, the rear sprocket and engine sprocket should also be changed. New chains wear out faster on old, worn sprockets.

- Check the chain sliding guard for wear.
  - » If the lower edge of the chain pin is at the level of or below the chain sliding guard:
    - Change the chain sliding guard. 🔧
- Check that the chain sliding guard is firmly seated.
  - » If the chain sliding guard is loose:
    - Tighten the screws on the chain sliding guard. Guideline

Screw, chain	M6	6 Nm (4.4 lbf ft)
sliding guard		Loctite <sup>®</sup> 243™

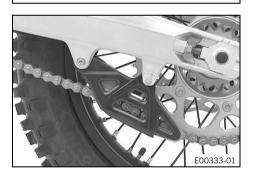

- Check the chain sliding piece for wear.
  - » If the lower edge of the chain pins is in line with or below the chain sliding piece:
    - Change the chain sliding piece. 🔌
- Check that the chain sliding piece is firmly seated.
  - » If the chain sliding piece is loose:
    - Tighten the screw on the chain sliding piece.

Guideline			
	Screw, chain slid-	M8	15 Nm
	ing piece		(11.1 lbf ft)

- Check the chain guide for wear.

•	Info
	Wear can be seen on the front of the chain guide.

- » If the light part of the chain guide is worn:
  - Change the chain guide. 🔧

- Check that the chain guide is firmly seated.
  - » If the chain guide is loose:
    - Tighten the screws on the chain guide.

(	Guideline			
	Remaining screws,	M6	10 Nm	
	chassis		(7.4 lbf ft)	

### **Finishing work**

- Remove the motorcycle from the lift stand. (IP p. 66)

### 12.39 Checking the frame 🔧

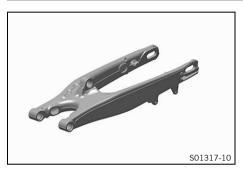

- Check the frame for cracks and deformation.
- » If the frame exhibits cracks or deformation due to a mechanical impact:
  - Change the frame. 🔧

### 

Always replace a frame that has been damaged due to a mechanical impact. Repair of the frame is not authorized by KTM.

### 12.40 Checking the swingarm 🔧

### Check the swingarm for damage, cracking, and deformation. » If the swingarm shows signs of damage, cracking, or defor

- If the swingarm shows signs of damage, cracking, or deformation:
  - Change the swingarm. 🔦

Always change a damaged swingarm. Repair of the swingarm is not authorized by KTM.

### 12.41 Checking throttle cable routing

### Preparatory work

- Remove the seat. (
   p. 80)
- Remove the fuel tank. 🔌 (🕮 p. 85)

- Check throttle cable routing.

Both throttle cables must be routed, side by side, on the back of the handlebars, above the fuel tank bracket on the right of the frame to the throttle valve body. Both throttle cables must be secured behind the fuel tank contact area rubber band.

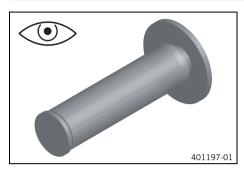

- » If the throttle cable routing is not as specified:
  - Correct throttle cable routing.

### **Finishing work**

- Install the fuel tank. 🔌 (🕮 p. 87)
- Mount the seat. (🕮 p. 80)

### 12.42 Checking the rubber grip

 Check the rubber grips on the handlebar for damage, wear, and looseness.

### Info

The rubber grips are vulcanized onto a sleeve on the left and onto the handle tube of the throttle grip on the right. The left sleeve is clamped onto the handlebar. The rubber grip can only be replaced with the sleeve or the throttle tube.

- » If a rubber grip is damaged or worn:
  - Change the rubber grip.

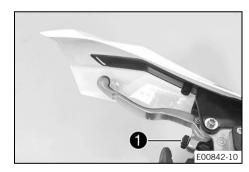

Check that screw 1 is firmly seated.

Guideline

Screw, fixed grip	M4	5 Nm (3.7 lbf ft) <b>Loctite®243™</b>
The diamond figure.	must be position	ned visibly as shown in the
		•

### 12.43 Adjusting the basic position of the clutch lever

Adjust the basic position of the clutch lever to your hand size by turning adjusting screw **1**.

### Info

Turn the adjusting screw counterclockwise to decrease the distance between the clutch lever and the handlebar.

Turn the adjusting screw clockwise to increase the distance between the clutch lever and the handlebar. The range of adjustment is limited.

Turn the adjusting screw by hand only, and do not apply any force.

Do not make any adjustments while riding.

### Warning

**Skin irritation** Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

### Warning

Environmental hazard Hazardous substances cause environmental damage.

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

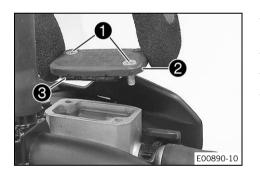

### Info

The fluid level rises with increasing wear of the clutch facing discs.

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.
- Check the fluid level.

Fluid level below container	4 mm (0.16 in)
rim	

If the level of the fluid does not meet specifications:

Correct the fluid level of the hydraulic clutch. \_

Brake fluid DOT 4 / DOT 5.1 (I p. 162)

Position the cover with the membrane. Mount and tighten the screws.

### Info

Clean up overflowed or spilled brake fluid immediately with water.

### 12.45 Changing the hydraulic clutch fluid 🔌

### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

### g Warning

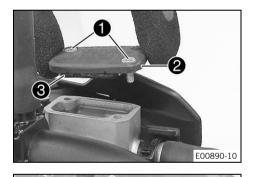

Environmental hazard Hazardous substances cause environmental damage.

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

## Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

4

5)

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.
- Fill bleeding syringe 4 with the appropriate hydraulic fluid.
   Syringe (50329050000)
   Brake fluid DOT 4 / DOT 5.1 (
   p. 162)
   On the clutch slave cylinder, remove bleeder protection cap,

F00891-10

On the clutch slave cylinder, remove bleeder protection cap, release the bleeder screw (5) and mount bleeding syringe (4).

- Now press the fluid into the system until it emerges from the hole (3) of the master cylinder without bubbles.
- Now and then, extract fluid from the master cylinder reservoir to prevent overflow.
- Remove the bleeding syringe. Tighten the bleeder screw.
- Correct the fluid level of the hydraulic clutch. Guideline

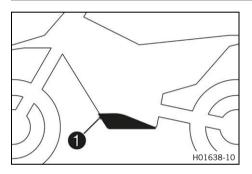

Fluid level below container	4 mm (0.16 in)
rim	

Position the cover with the membrane. Mount and tighten the screws.

### lnfo

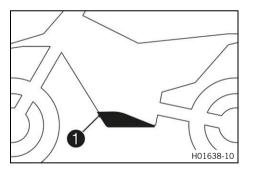

Clean up overflowed or spilled brake fluid immediately with water.

### 12.46 Removing the engine guard (All Six Days models)

Remove screws 1 and engine guard.

### 12.47 Installing the engine guard (All Six Days models)

- Attach the engine guard on the frame at the rear and swing up at the front.
- Mount and tighten screws ①.
   Guideline

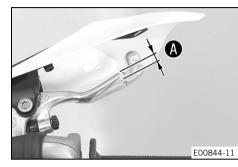

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

### 13.1 Checking the free travel of the hand brake lever

## Warning

Danger of accidents The brake system fails in the event of overheating.

- If there is no free travel on the hand brake lever, pressure builds up on the front brake circuit.
- Set the free travel on the hand brake lever in accordance with the specification.

### (All EXC models) - Push the

 Push the hand brake lever to the handlebar and check free travel (A).

Free travel of hand brake	≥ 3 mm (≥ 0.12 in)
lever	

» If the free travel does not match the specification:

Adjust the free travel of the hand brake lever.
 (
 p. 99)

### (250 XC-W TPI US)

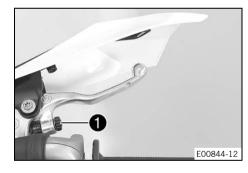

Push the hand brake lever forward and check free travel old A.

Free travel of hand brake lever	≥ 3 mm (≥ 0.12 in)
If the free travel does not match the specification:	

Adjust the basic position of the hand brake lever.
 (
 <sup>(</sup>
 <sup>()

### 13.2 Adjusting free travel of hand brake lever (All EXC models)

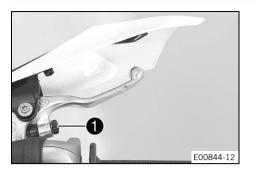

- Check the free travel of the hand brake lever. (🕮 p. 99)
- Adjust the free travel of the hand brake lever with the adjustment screw **1**.

### Info

- Turn the adjusting screw clockwise to reduce free travel. The pressure point moves away from the handlebar.
- Turn the adjusting screw counterclockwise to increase free travel. The pressure point moves towards the handlebar.
- The range of adjustment is limited.
- Turn the adjusting screw by hand only, and do not apply any force.
- Do not make any adjustments while riding!

### 13.3 Adjusting the basic position of the hand brake lever (250 XC-W TPI US)

- Check the free travel of the hand brake lever. (
  p. 99)
- Adjust the basic setting of the hand brake lever to your hand size by turning adjusting screw **①**.

## • Info

Turn the adjusting screw clockwise to increase the distance between the hand brake lever and the handlebar.

Turn the adjusting screw counterclockwise to decrease the distance between the hand brake lever and the handlebar.

The range of adjustment is limited.

Turn the adjusting screw by hand only, and do not apply any force.

Do not make any adjustments while riding!

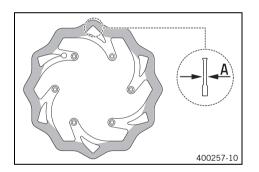

### 13.4 Checking the brake discs

## Warning

Danger of accidents Worn-out brake discs reduce the braking effect.

 Make sure that worn-out brake discs are replaced immediately. (Your authorized KTM workshop will be glad to help.)

- Check the front and rear brake disc thickness at multiple points for the dimension **A**.

• Info

Wear reduces the thickness of the brake disc around the contact surface of the brake linings.

Brake discs - wear limit (All standard EXC/XC-W models)		
front	2.5 mm (0.098 in)	
rear	3.5 mm (0.138 in)	
Brake discs - wear limit (All Six Days models)		
front	2.5 mm (0.098 in)	
rear	3.7 mm (0.146 in)	

- » If the brake disc thickness is less than the specified value:
  - Change the front brake disc.
  - Change the rear brake disc. 🔌
- Check the front and rear brake discs for damage, cracking, and deformation.
  - » If the brake disc exhibits damage, cracking, or deformation:
    - Change the front brake disc. 🔌
    - Change the rear brake disc. 🔌

### 13.5 Checking the front brake fluid level

### Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail. If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

### Warning

**Danger of accidents** Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Check the brake fluid level in level viewer ①.
  - » If an air bubble is visible in upper range of the level viewer A:
    - Add front brake fluid. 🔌 (🕮 p. 101)

13.6 Adding front brake fluid 🔧

Warning Danger of accidents An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

### Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

### Warning

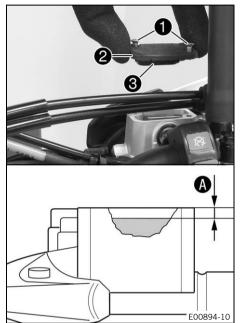

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

lnfo

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.
- Add brake fluid to level **A**.

Guideline

Brake fluid DOT 4 / DOT 5.1 (🕮 p. 162)

Position the cover with the membrane. Mount and tighten the screws.

### Info

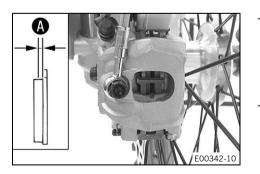

Clean up overflowed or spilled brake fluid immediately with water.

### 13.7 Checking the front brake linings

## Warning

Danger of accidents Worn-out brake linings reduce the braking effect.

 Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

- Check the brake linings for minimum thickness (A).

Minimum thickness 🚯	≥ 1 mm (≥ 0.04 in)
» If the minimum thickness is I	ess than specified:
<ul> <li>Change the front brake lir</li> </ul>	nings. 🔌 (🕮 p. 103)
Check the brake linings for dama	ge and cracking.
» If damage or wear is encounted	ered:
<ul> <li>Change the front brake lir</li> </ul>	nings. 🔌 (🕮 p. 103)

### 13.8 Changing the front brake linings 🔧

### Warning

Danger of accidents Incorrect maintenance will cause the brake system to fail.

 Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

### Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

### Warning

Danger of accidents Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

## Warning

**Danger of accidents** Brake linings which have not been approved alter the braking efficiency.

Not all brake linings are tested and approved for KTM motorcycles. The structure and friction coefficient of the brake linings, and thus their brake power, may vary greatly from that of original brake linings. If brake linings are used that differ from the original equipment, compliance with the original homologation is not guaranteed. In this case, the vehicle no longer corresponds to its condition at delivery and the warranty shall be void.

- Only use brake linings approved and recommended by KTM.

### Warning

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

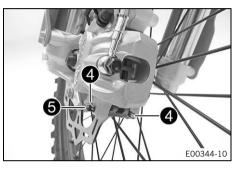

# **13 BRAKE SYSTEM**

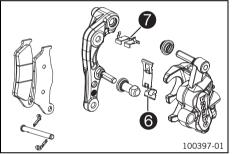

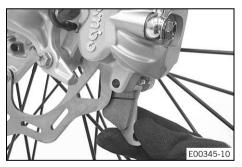

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.
- Manually press the brake caliper toward the brake disc to push back the brake pistons. Ensure that brake fluid does not flow out of the brake fluid reservoir, if necessary extract excess.

### Info

- Make sure that you do not press the brake caliper against the spokes when pushing back the brake pistons.
- Remove cotter pins (4), pull out pin (5), and remove the brake linings.
- Clean the brake caliper and brake caliper support.

Check that leaf spring  $\bigcirc$  in the brake caliper and sliding plate  $\bigcirc$  in the brake caliper support are seated correctly.

Insert the new brake linings, insert the pin, and mount the cotter pins.

\_

Always change the brake linings in pairs.

- Operate the hand brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.
- Correct the brake fluid quantity to level A.

Guideline
-----------

Level (A) (brake fluid level below reservoir rim)	5 mm (0.2 in)
Brake fluid DOT 4 / DOT 5.1 (	🕮 p. 162)

Position the cover with the membrane. Mount and tighten the screws.

Clean up overflowed or spilled brake fluid immediately with water.

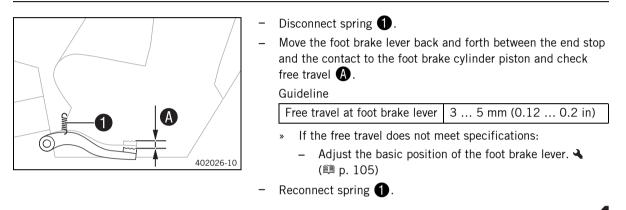

### 13.9 Checking the free travel of foot brake lever

### Warning

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

Set the free travel on the foot brake lever in accordance with the specification.

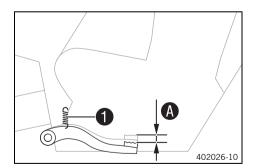

### 13.10 Adjusting the basic position of the foot brake lever 🔌

### Warning

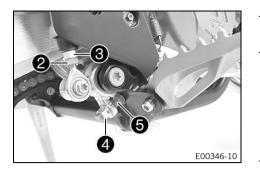

Danger of accidents The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

Set the free travel on the foot brake lever in accordance with the specification. \_

Disconnect spring 1.

- Loosen nut **2** and, with push rod **3**, turn it back until you have maximum free travel.
- To adjust the basic position of the foot brake lever to individual requirements, loosen nut 4 and turn screw 5 accordingly.

### • Info

- The range of adjustment is limited.
- Turn push rod (3) accordingly until you have free travel (A). If necessary, adjust the basic position of the foot brake lever. Guideline

Free travel at foot brake lever 3 ... 5 mm (0.12 ... 0.2 in)

Hold screw 6 and tighten nut 4.

Guideline

Nut, foot brake lever	M8	20 Nm (14.8 lbf ft)
stop		

Hold push rod 🕄 and tighten nut 2.

Guideline

Remaining nuts, M6 chassis	10 Nm (7.4 lbf ft)
-------------------------------	--------------------

Reconnect spring 1.

### ◀

### 13.11 Checking the rear brake fluid level

### Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail. If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

### Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

- Stand the vehicle upright.
- Check the brake fluid level in the viewer 1.
  - » If the fluid has dropped below marking (A) in the level viewer:
    - Add rear brake fluid. 🔌 (🕮 p. 107)

### 13.12 Adding rear brake fluid 🔧

## Warning

Danger of accidents An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

## Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

### Warning

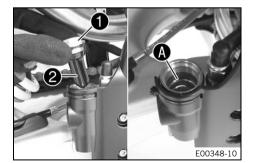

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

### Preparatory work

- Check the brake linings of the rear brake. (🕮 p. 108)

#### Main work

- Stand the vehicle upright.
- Remove screw cap 1 with membrane 2 and the O-ring.
- Add brake fluid to level A.

Brake fluid DOT 4 / DOT 5.1 (🕮 p. 162)

 Mount and tighten the screw cap with the membrane and Oring.

Info

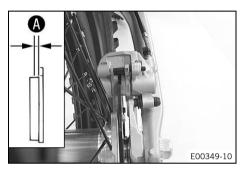

Clean up overflowed or spilled brake fluid immediately with water.

### 13.13 Checking the brake linings of the rear brake

### Warning

**Danger of accidents** Worn-out brake linings reduce the braking effect.

Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

- Check the brake linings for minimum thickness (A).
  - Minimum thickness  $\triangle$   $\geq 1 \text{ mm} (\geq 0.04 \text{ in})$
  - » If the minimum thickness is less than specified:
     Change the rear brake linings. 
     (IP) p. 108)
  - Check the brake linings for damage and cracking.
  - » If damage or wear is encountered:
    - Change the rear brake linings. 🔧 (🕮 p. 108)

### 13.14 Changing the rear brake linings 🔌

### Warning

Danger of accidents Incorrect maintenance will cause the brake system to fail.

 Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

### Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

### Warning

**Danger of accidents** Brake linings which have not been approved alter the braking efficiency.

Not all brake linings are tested and approved for KTM motorcycles. The structure and friction coefficient of the brake linings, and thus their brake power, may vary greatly from that of original brake linings. If brake linings are used that differ from the original equipment, compliance with the original homologation is not guaranteed. In this case, the vehicle no longer corresponds to its condition at delivery and the warranty shall be void.

### Warning

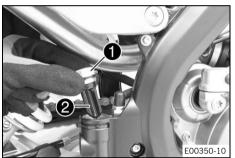

Environmental hazard Hazardous substances cause environmental damage.

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

## Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Stand the vehicle upright.

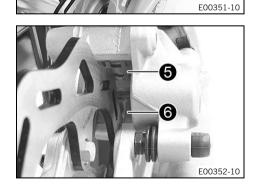

• Remove screw cap 1 with membrane 2 and the O-ring.

 Press the brake piston back into the basic position and ensure that brake fluid does not flow out of the brake fluid reservoir, if necessary extract excess.

### Info

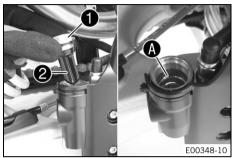

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

- Remove cotter pins 3, pull out pin 4, and remove the brake linings.
- Clean the brake caliper and brake caliper support.

Check that leaf spring (5) in the brake caliper and sliding plate (6) in the brake caliper support are seated correctly.

Insert the new brake linings, insert the pin, and mount the cotter pins.

- Always change the brake linings in pairs.
- Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.
- Add brake fluid to level 🗛.

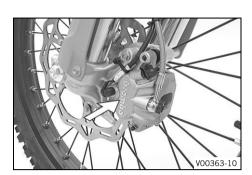

- Mount screw cap 1 with membrane 2 and O-ring.

### • Info

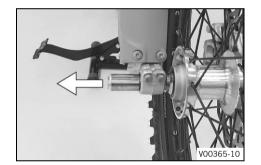

Clean up overflowed or spilled brake fluid immediately with water.

4

### 14.1 Removing the front wheel 🔧

#### Preparatory work

- Raise the motorcycle with a lift stand. (
p. 66)

#### Main work

 Press the brake caliper onto the brake disc by hand in order to push back the brake pistons.

Make sure that you do not press the brake caliper against the spokes when pushing back the brake pistons.

- Loosen screw 1 by several rotations.
- Loosen screws **2**.
- Press on screw **1** to push the wheel spindle out of the axle clamp.
- Remove screw 1.

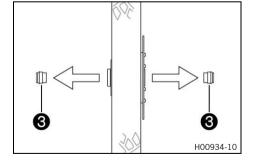

### Warning

**Danger of accidents** Damaged brake discs reduce the braking effect.

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Holding the front wheel, withdraw the wheel spindle. Take the front wheel out of the fork.

#### Info

Do not pull the hand brake lever when the front wheel is removed.

### Remove spacers 🚯.

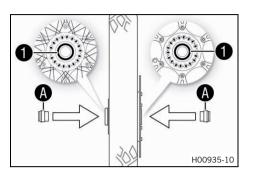

111

### 14.2 Installing the front wheel 🔧

### Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
  - Clean the brake discs with brake cleaner when necessary.

- Check the wheel bearing for damage and wear.
  - » If the wheel bearing is damaged or worn:
    - Change front wheel bearing. 🔌

Long-life grease (🕮 p. 164)

- Insert the spacers.
- Clean and grease the wheel spindle.

Long-life grease (🕮 p. 164)

- Lift the front wheel into the fork, position it, and insert the wheel spindle.
  - ✓ The brake linings are correctly positioned.
- Mount and tighten screw 2.

Guideline

Screw, front wheel	M20x1.5	35 Nm (25.8 lbf ft)
spindle		

- Operate the hand brake lever several times until the brake linings are seated correctly against the brake disc.
- Remove the motorcycle from the lift stand. (
  p. 66)
- Operate the front brake and compress the fork a few times firmly.
  - ✓ The fork legs straighten.
- Tighten screws 🚯.

Guideline

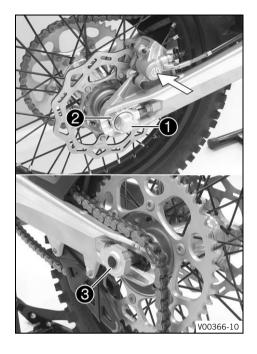

Screw, fork stub	M8	15 Nm (11.1 lbf ft)

### 14.3 Removing the rear wheel 🔌

#### Preparatory work

- Raise the motorcycle with a lift stand. (E p. 66)

#### Main work

- Press the brake caliper onto the brake disc by hand in order to push back the brake piston.

### Info

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

### Remove nut 🚺.

- Remove chain adjuster ②. Pull out wheel spindle ③ far enough to allow the rear wheel to be pushed forward.
  - Push the rear wheel forward as far as possible. Remove the chain from the rear sprocket.

### Info

Cover the components to protect them against damage.

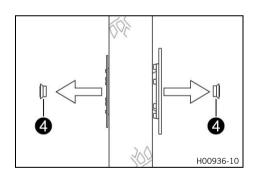

### Warning

**Danger of accidents** Damaged brake discs reduce the braking effect.

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Holding the rear wheel, withdraw the wheel spindle. Take the rear wheel out of the swingarm.

### Info

Do not operate the foot brake lever when the rear wheel is removed.

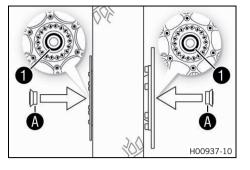

#### Remove spacers 4.

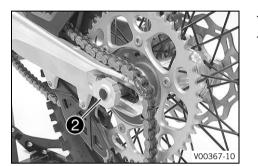

14.4 Installing the rear wheel A

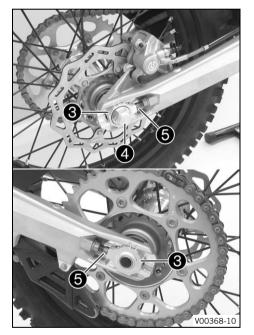

### Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

#### Main work

- Check the wheel bearing for damage and wear.
  - » If the wheel bearing is damaged or worn:
    - Change the rear wheel bearing. 🔧
- Clean and grease shaft seal rings 1 and contact surface A of the spacers.

- Insert the spacers.
- Clean and grease the wheel spindle.
- Long-life grease (🕮 p. 164)
- Position the rear wheel and insert wheel spindle 2.
- Mount the chain.
  - ✓ The brake linings are correctly positioned.
- Position chain adjuster 3. Mount nut 4, but do not tighten it yet.
- Make sure that chain adjusters ③ are fitted correctly on adjusting screws ⑤.
- Check the chain tension. (
  p. 90)
- Tighten nut **4**.
- Guideline

Nut, rear wheel spin-	M20x1.5	80 Nm (59 lbf ft)
dle		

### Info

- The wide adjustment range of the chain adjusters (32 mm (1.26 in)) enables different secondary ratios with the same chain length. Chain adjusters (3) can be turned by 180°.
- Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

#### **Finishing work**

◀

### 14.5 Checking the tire condition

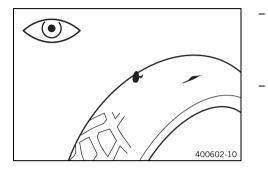

### lnfo

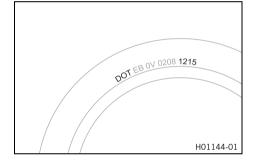

Only mount tires approved and/or recommended by KTM.

Other tires could have a negative effect on handling characteristics.

The type, condition, and air pressure of the tires all have a major impact on the handling of the motorcycle.

Worn tires have a negative effect on handling characteristics, especially on wet surfaces.

- Check the front and rear tires for cuts, run-in objects, and other damage.
  - » If the tires have cuts, run-in objects, or other damage:
     Change the tires. ◄
- Check the tread depth.

#### Info

•

Adhere to the legally required minimum tread depth.

Minimum tread depth	≥ 2 mm (≥ 0.08 in)
---------------------	--------------------

- » If the tread depth is less than the minimum tread depth:
   Change the tires. ◄
- Check the tire age.

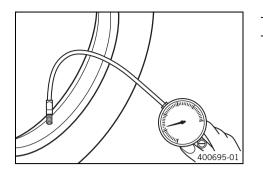

Info The tire date of manufacture is usually contained in the
tire label and is indicated by the last four digits of the <b>DOT</b> number. The first two digits indicate the week of manufacture and the last two digits the year of manufacture. KTM recommends that the tires be changed after 5 years at the latest, regardless of the actual state of wear.

- » If the tires are more than 5 years old:
  - Change the tires.

### 14.6 Checking the tire air pressure

### Info

Low tire air pressure leads to abnormal wear and overheating of the tire. Correct tire air pressure ensures optimal riding comfort and maximum tire service life.

- Remove the dust cap.
- Check the tire air pressure when the tires are cold.

Tire air pressure, road (All EXC models)		
front	1.5 bar (22 psi)	
rear	1.5 bar (22 psi)	
Tire air pressure off road		
front	1.0 bar (15 psi)	
rear	1.0 bar (15 psi)	

- » If the tire pressure does not meet specifications:
- Correct the tire pressure.
- Mount the dust cap.

### 14.7 Checking spoke tension

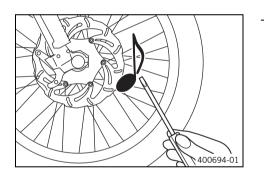

### Warning

**Danger of accidents** Incorrectly tensioned spokes impair the handling characteristic and result in secondary damage.

The spokes break due to being overloaded if they are too tightly tensioned. If the tension in the spokes is too low, then lateral and radial run-out will form in the wheel. Other spokes will become looser as a result.

 Check spoke tension regularly, and in particular on a new vehicle. (Your authorized KTM workshop will be glad to help.)

- Strike each spoke briefly using a screwdriver blade.

### Info

The frequency of the sound depends on the spoke length and spoke diameter. If you hear different tone frequencies from different spokes of equal length and diameter, this is an indication of different spoke tensions.

You should hear a high note.

- » If the spoke tension differs:
  - Correct the spoke tension. 🔦
- Check the spoke torque.

Guideline

Spoke nipple, front wheel	M4.5	6 Nm (4.4 lbf ft)	
Spoke nipple, rear wheel	M4.5	6 Nm (4.4 lbf ft)	
Torque wrench set (58429094000)			

•

### 15.1 Removing the battery 🔧

# ₹\$¢

### Warning

Environmental hazard Batteries contain environmentally-hazardous materials.

- Do not dispose of batteries as household waste.
- Dispose of batteries at a collection point for used batteries.

### Warning

Environmental hazard Hazardous substances cause environmental damage.

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### Preparatory work

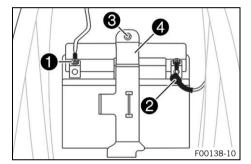

### (All EXC models)

 Press and hold the kill switch ⊗ while the engine is idling until the engine stops.

#### (250 XC-W TPI US)

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Remove the seat. (📖 p. 80)

### Main work

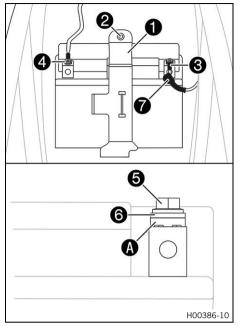

### Warning

**Risk of injury** Batteries contain harmful substances.

- Keep batteries out of the reach of children.
- Keep sparks and open flames away from the batteries.
- Only charge batteries in well-ventilated rooms.
- Maintain a minimum clearance from inflammable materials when charging batteries.
   Minimum clearance 1 m (3 ft)
- Do not charge deeply discharged batteries if charge is already below the minimum voltage.
   Minimum voltage before 9 V the start of the charge
- Dispose of batteries with less than the minimum voltage correctly.
- Disconnect negative cable 1 from the battery.
- Pull back positive terminal cover ② and disconnect the positive cable from the battery.
- Remove screw **3**.
- Pull holding bracket 4 forward and remove battery toward the top.

### 15.2 Installing the battery 🔧

#### Main work

- Insert the battery into the battery compartment with the terminals facing forward and secure with holding bracket **①**.

	Battery (HJTZ5S-FP) (🕮 p. 157)
_	Mount and tighten screw 2.
	Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

- Connect positive cable 3 to the battery.

Guideline

Screw, battery termi-	M5	2.5 Nm
nal		(1.84 lbf ft)

Contact disks (A) must be mounted under the screw (5) and the cable lug (6) with the claws toward the battery terminal.

- Slide positive terminal cover 🕜 over the positive terminal.
- Connect negative cable 4 to the battery.

Guideline

Screw, battery termi- nal	M5	2.5 Nm (1.84 lbf ft)
Contact disks <b>A</b> must the cable lug <b>6</b> with		

Finishing work

– Mount the seat. (🕮 p. 80)

### 15.3 Recharging the battery 🔧

### A Warning

**Environmental hazard** Batteries contain environmentally-hazardous materials.

- Do not dispose of batteries as household waste.
- Dispose of batteries at a collection point for used batteries.

### 2 Warning

Environmental hazard Hazardous substances cause environmental damage.

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### • Info

Even when there is no load on the battery, it discharges steadily. The charging level and the method of charging are very important for the service life of the battery. Rapid recharging with a high charging current shortens the service life of the battery. If the battery is depleted by repeated starting, the battery must be charged immediately.

### Preparatory work

### (All EXC models)

 Press and hold the kill switch ⊗ while the engine is idling until the engine stops.

#### (250 XC-W TPI US)

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Remove the seat. (🕮 p. 80)
- Remove the battery. 🔌 (🕮 p. 117)

### Main work

**Risk of injury** Batteries contain harmful substances.

- Keep batteries out of the reach of children.
- Keep sparks and open flames away from the batteries.
- Only charge batteries in well-ventilated rooms.
- Maintain a minimum clearance from inflammable materials when charging batteries.
   Minimum clearance 1 m (3 ft)
- Do not charge deeply discharged batteries if charge is already below the minimum voltage.
   Minimum voltage before 9 V the start of the charge
- Dispose of batteries with less than the minimum voltage correctly.
- Check the battery voltage.

»

- Battery voltage: < 9 V
  - Do not charge the battery.
- Replace the battery and dispose of the old battery properly.
- » If the specifications have been met: Battery voltage: ≥ 9 V
  - Connect the battery charger to the battery. Switch on the battery charger.

Guideline	
Maximum charging volt-	14.4 V
age	
Maximum charging cur-	3.0 A
rent	
Maximum charging time	12 h
Charge the battery regu-	6 months
larly when the motorcy-	
cle is not in use	
Ideal charging and stor-	10 20 °C (50
age temperature of the	68 °F)
lithium-ion battery	

### Battery charger (58429074000)

The charging time may be longer at low temperatures. This battery charger is not suitable for the trickle charging of lithium-ion batteries.

## • Info

If the charging current, charging voltage, or charging time are exceeded, the battery will be destroyed. If the battery is left in a discharged state for an extended period, it will become over-discharged and sulfated, destroying the battery. The battery is maintenance-free. Never remove cover **1**.

Switch off the battery charger after charging and disconnect from the battery.

#### **Finishing work**

- Install the battery. 🔧 🕮 p. 118)
- Mount the seat. (🕮 p. 80)

### 15.4 Changing the main fuse

### Warning

Fire hazard Incorrect fuses overload the electrical system.

- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

Info

The main fuse protects all power consumers of the vehicle.

#### Preparatory work (All EXC models)

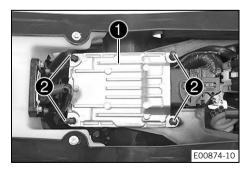

- Press and hold the kill switch  $\bigotimes$  while the engine is idling until the engine stops.

#### (250 XC-W TPI US)

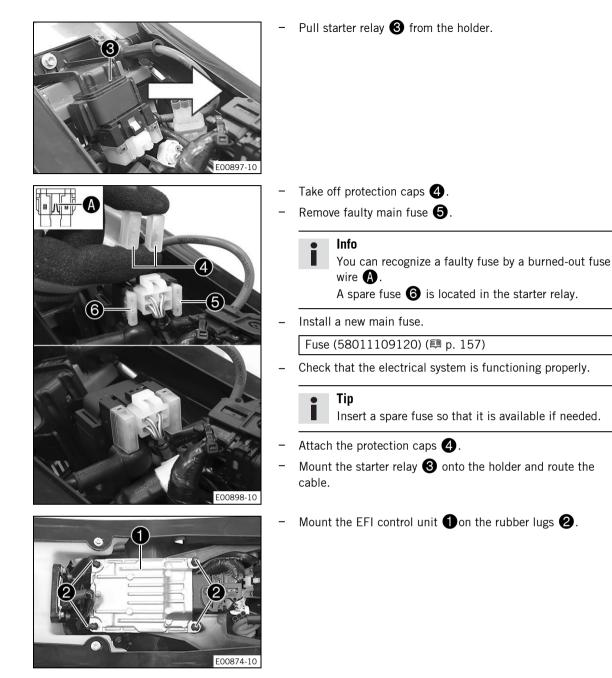

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Remove the seat. (🕮 p. 80)

#### Main work

Pull the EFI control unit **1** upward off the rubber plugs **2** and hang to the side.

# **15 ELECTRICAL SYSTEM**

### **Finishing work**

– Mount the seat. (🕮 p. 80)

.

#### **ELECTRICAL SYSTEM** 15

#### 15.5 Changing the fuses of individual power consumers

#### Info •

The fuse box containing the fuses of individual power consumers is located under the seat.

## **Preparatory work**

#### (All EXC models)

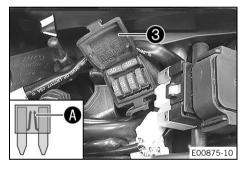

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.

### (250 XC-W TPI US)

- Press and hold the kill switch  $\bigotimes$  while the engine is idling until the engine stops.
- Remove the seat. (
  p. 80)

#### Main work

- Pull the EFI control unit 1 upward off the rubber plugs 2 \_ and hang to the side.
- (1 E00874-10

- Open fuse box cover **3**.
- Remove the defective fuse.

#### Guideline (All EXC models)

Fuse 1 - 10 A - EFI control unit, lambda sensor,
oil pump, combination instrument, fuel injection,
diagnostics connector
Fuse <b>2</b> - 10 A - horn, brake light, radiator fan (optional),
turn signal (optional)
Fuse <b>3</b> - 10 A - high beam, low beam, parking light, tail
light, license plate lamp
Fuse 4 - 5 A - fuel pump

### (250 XC-W TPI US)

Fuse <b>1</b> - 10 A - EFI control unit, oil pump, combination
instrument, fuel injection, diagnostics connector
Fuse <b>2</b> - 10 A - radiator fan (optional)
Fuse <b>3</b> - 10 A - low beam, parking light, tail light
Fuse <b>4</b> - 5 A - fuel pump

Fuses res - 10 A - spare fuse

### Info

You can recognize a faulty fuse by a burned-out fuse wire **A**.

## Warning

Fire hazard Incorrect fuses overload the electrical system.

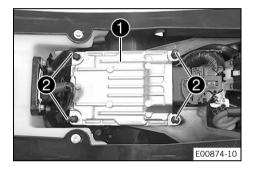

- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.
- Use spare fuses with the correct rating only.

Fuse (75011088010) (🕮 p. 157)
Fuse (75011088005) (🕮 p. 157)

#### Tip

Replace the spare fuse in the fuse box so that it is available if needed.

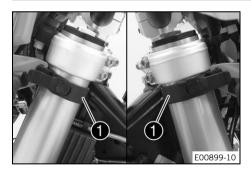

- Check that the power consumer is functioning properly.
- Close the fuse box cover **3**.
- Mount the EFI control unit 1 on the rubber lugs 2.

#### **Finishing work**

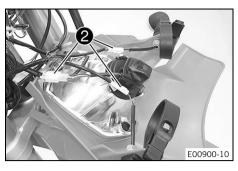

– Mount the seat. (🕮 p. 80)

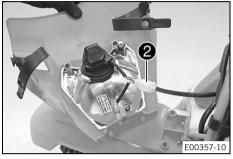

### 15.6 Removing the headlight mask with the headlight

- Detach the brake line and wiring harness from the headlight mask.
- Release rubber bands ①. Slide the headlight mask up and swing it forward.

# **15 ELECTRICAL SYSTEM**

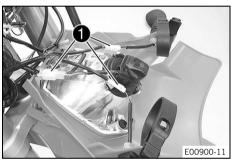

#### (All EXC models)

- Detach plug-in connectors **2** and take off the headlight mask with the headlight.

#### (250 XC-W TPI US)

 Detach plug-in connector 2 and take off the headlight mask with the headlight.

### 15.7 Installing the headlight mask with the headlight

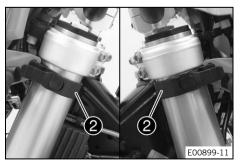

### Main work (All EXC models)

- Connect plug-in connectors 1.

## (250 XC-W TPI US)

- Connect plug-in connector **①**.

- Position the headlight mask and fix it with rubber bands 2.
   The holding lugs engage in the fender.
- Position the brake line and wiring harness in the brake line guide.

#### **Finishing work**

- Check the headlight setting. (🕮 p. 126)

### 15.8 Changing the headlight bulb

### Note

Damage to reflector Grease on the reflector reduces the brightness.

Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

E00358-10

- Clean and degrease the bulbs before mounting.
- Do not touch the bulbs with your bare hands.

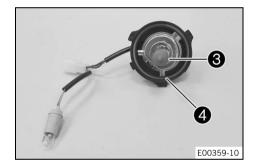

1

#### Preparatory work

Remove the headlight mask with the headlight. (🕮 p. 123)

#### Main work

- Turn protection cap 1 together with the underlying bulb socket counterclockwise all the way and remove it.
- Pull bulb socket **2** of the parking light out of the reflector.

- Pull out headlight bulb 3.
- Insert the new headlight bulb.

Headlight (HS1/socket BX43t) (🕮 p. 157)

Insert the protection cap with the bulb socket into the reflector and turn it clockwise all the way.

- Insert the bulb socket of the parking light into the reflector.

#### **Finishing work**

- Install the headlight mask with the headlight. (🕮 p. 124)
- Check the headlight setting. (IP p. 126)

### 15.9 Changing the turn signal bulb (All EXC models)

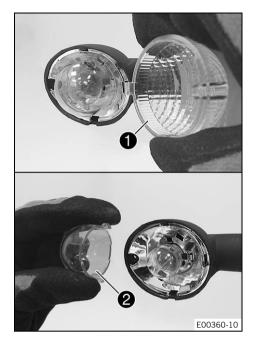

#### Note

**Damage to reflector** Grease on the reflector reduces the brightness.

Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

- Clean and degrease the bulbs before mounting.
- Do not touch the bulbs with your bare hands.

# **15 ELECTRICAL SYSTEM**

#### Main work

- Remove the screw on the rear of the turn signal housing.
- Carefully remove turn signal glass 1.
- Lightly squeeze orange cap **2** in the area of the holding lugs and take it off.
- Press the turn signal bulb lightly into the socket, turn it counterclockwise by about 30°, and take it out of the socket.

### • Info

Do not touch the reflector with your fingers and keep it free from grease.

Press the new turn signal bulb carefully into the socket and turn it clockwise until it stops.

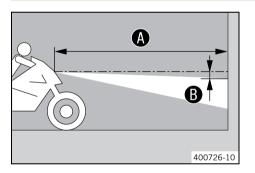

Turn signal (R10W / socket BA15s) (🕮 p. 157)

- Mount the orange cap.
- Position the turn signal glass.
- Insert the screw and first turn counterclockwise until it engages in the thread with a small jerk. Tighten the screw lightly.

#### **Finishing work**

- Check that the turn signal system is functioning properly.

### 15.10 Checking the headlight setting

- Position the vehicle upright on a horizontal surface in front of a light wall and make a mark at the height of the center of the low beam headlight.
- Make another mark at a distance **B** under the first mark. Guideline

Distance <b>B</b>	
-------------------	--

Position the vehicle vertically a distance (A) away from the wall.

5 cm (2 in)

### Guideline

Distance A 5	m (16 ft)
--------------	-----------

- The rider now sits down on the motorcycle.
- Switch on the low beam.
- Check the headlight setting.

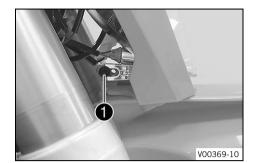

The boundary between light and dark must be exactly on the lower mark for a motorcycle with rider.

- » If the light-dark border does not meet specifications:
  - Adjust the headlight range. (
    p. 127)

#### 15.11 Adjusting the headlight range

Check the headlight setting. (I p. 126) \_

#### Main work

- Loosen screw 1.
- Adjust the headlight range by pivoting the headlight. Guideline

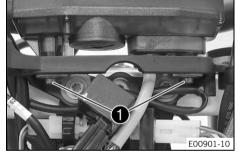

The boundary between light and dark must be exactly on the lower marking for a motorcycle with rider (instructions on how to apply the marking: Checking the headlight setting).

#### Info

If you have a payload, you may have to correct the headlight range.

Tighten screw 1.

#### 15.12 Changing the combination instrument

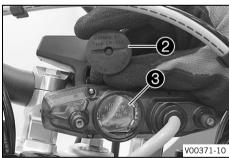

#### **Preparatory work**

Remove the headlight mask with the headlight. (
p. 123)

#### Main work

- Remove screws 1.
- Pull the combination instrument upward out of the holder.

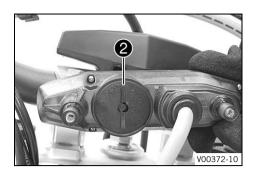

- Using a coin, turn protection cap 2 all the way counterclock-\_ wise and remove it.
- Remove combination instrument **3**. \_
- Insert the new battery with the label facing outward. \_

	Combination instrument battery (CR 2430) (🕮 p. 157)	
--	---	--

Check the O-ring of the protection cap for correct seating.

# **15 ELECTRICAL SYSTEM**

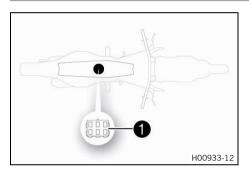

- Position protection cap **2** and turn all the way clockwise using a coin.
- Press any button on the combination instrument.
- $\checkmark$  The combination instrument is activated.
- Position the combination instrument in the holder.
- Mount and tighten the screws with washers.

### **Finishing work**

- Install the headlight mask with the headlight. (eqp. 124)
- Check the headlight setting. (
  p. 126)
- Set kilometers or miles. (
  p. 26)
- Adjust the combination instrument function. (
  p. 27)
- Set the clock. (🕮 p. 28)

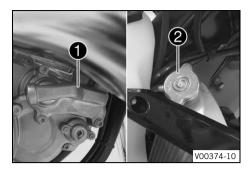

### 15.13 Diagnostics connector

Diagnostics connector 1 is located under the seat.

## 16 COOLING SYSTEM

### 16.1 Cooling system

Water pump lacksquare in the engine circulates the coolant.

The pressure resulting from the warming of the cooling system is regulated by a valve in radiator cap **2**. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

120 °C (248 °F)

Cooling is effected by the air stream. The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.

### 16.2 Checking the antifreeze and coolant level

### Warning

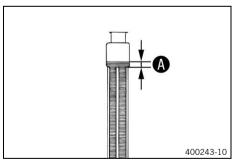

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

### Warning

Danger of poisoning Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
  - Check the coolant antifreeze.

-25	-45 °C (-13	−49 °F)
-----	-------------	---------

- If the antifreeze in the coolant does not match the specified value:
  - Correct the coolant antifreeze.
- Check the coolant level in the radiator.

Coolant level 🚯 above the	10 mm (0.39 in)
radiator fins	

- » If the coolant level does not match the specified value:
  - Correct the coolant level.

Coolant (🕮 p. 162)	
--------------------	--

- Mount the radiator cap.

#### 16.3 Checking the coolant level

### Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

### Warning

Danger of poisoning Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

400243-10

#### Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
- Check the coolant level in the radiator.
  - Coolant level (A) above the 10 mm (0.39 in) radiator fins
  - » If the coolant level does not match the specified value:
    - · Correct the coolant level.

Coolant (🕮 p. 162)

Mount the radiator cap.

### 16.4 Draining the coolant 🔦

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

### Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

### Condition

The engine is cold.

- Position the motorcycle upright.
- Place a suitable container under the water pump cover.
- Remove screw 1. Take off radiator cap 2.
- Completely drain the coolant.
- Mount and tighten screw 
   with a new seal ring. Guideline

Screw, water pump cover	M6	10 Nm (7.4 lbf ft)

### 16.5 Refilling with coolant 🔦

### Warning

Danger of poisoning Coolant is toxic and a health hazard.

V00374-11

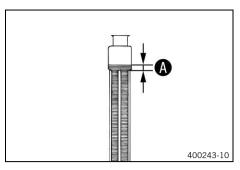

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

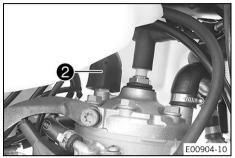

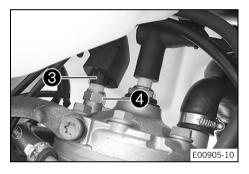

#### Main work

- Make sure that screw **1** is tightened.
- Position the motorcycle upright.

# 16 COOLING SYSTEM

400243-10

Pour coolant in up to measurement **A** above the radiator fins. Guideline

10 mm (0.39 in)		
Coolant	1.2   (1.3 qt.)	Coolant (🕮 p. 162)

Push protection cap 2 upward over the thermostat.

- Unplug connector 🕄.
- Remove thermostat with O-ring and wait until the coolant escapes without bubbles.

Screw, cylinder head	M10x1.25	12 Nm (8.9 lbf ft)
temperature sensor		

- Plug in connector 3.
- Position protection cap **2**.
- Pour coolant in up to measurement A above the radiator fins.
   Guideline

10 mm (0.39 in)

Coolant (🕮 p. 162)

- Mount radiator cap 🚯.

### **Danger**

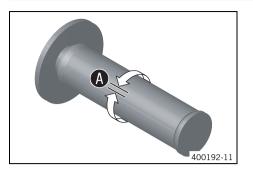

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Allow the engine to warm up and cool down again.

Finishing work − Check the coolant level. (ﷺ p. 130)

◀

### 17.1 Checking the play in the throttle cable

- Check the throttle grip for smooth operation.
- Turn the handlebar as far as possible to the right. Turn the throttle grip back and forth slightly and determine the play in throttle cable  $\mathbf{A}$ .

Play in throttle cable	3 5 mm (0.12 0.2 in)
------------------------	-------------------------

» If the throttle cable play does not meet the specified value:
 – Adjust the play in the throttle cable. ◄ ( p. 134)

	Dange
•	Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and let it run idle. Move the handlebar to and fro over the entire steering range.

The idle speed must not change.

- » If the idle speed changes:
  - Adjust the play in the throttle cable. 

     (IP) p. 134)

### 17.2 Adjusting the play in the throttle cable 🔌

### lnfo

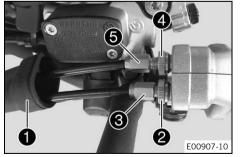

If the correct routing of the throttle cables has already been secured, the fuel tank does not need to be removed.

### Preparatory work

- Remove the seat. (🕮 p. 80)
- Remove the fuel tank. 🔌 (🕮 p. 85)
- Check throttle cable routing. (
  p. 94)

#### Main work

- Move the handlebar to the straight-ahead position.
- Push back sleeve 1.
- Loosen nut **2**.
- Turn adjusting screw **(3)** in as far as possible.
- Loosen nut **4**.
- Turn adjusting screw (5) in as far as possible.
- Turn adjusting screw ③ so that there is play in the throttle cable at the throttle grip.

### Guideline

 Play in throttle cable
 3 ... 5 mm (0.12 ... 0.2 in)

- Unscrew the adjusting screw **6** until the smooth operation or play in throttle cable is worsened.
- Turn the adjusting screw **(5)** approx. two turns further.
- Tighten nut **4**.
- Tighten nut **2**.
- Slide on sleeve 1.
- Check the throttle grip for smooth operation.

#### **Finishing work**

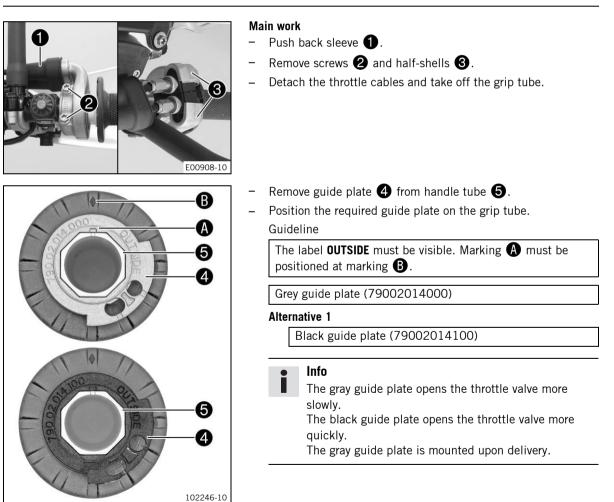

- Check the play in the throttle cable. (IP p. 134)

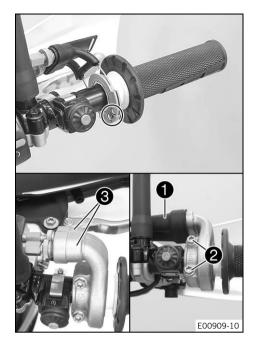

### 17.3 Setting the characteristic map of the throttle response 🔧

### Info

On the throttle grip, the characteristic map of the throttle response is changed by changing the guide plate.

A guide plate with a different characteristic map is supplied.

- Clean the outside of the handlebar and the inside of the grip tube. Mount the grip tube on the handlebar.
- Attach the throttle cables to the guide plate and route correctly.
- Position half-shells ③, mount and tighten screws ②.
   Guideline

Screw, throttle grip	M6	5 Nm (3.7 lbf ft)

Slide on sleeve **1** and check the throttle grip for ease of movement.

### Finishing work

- Check the play in the throttle cable. (
p. 134)

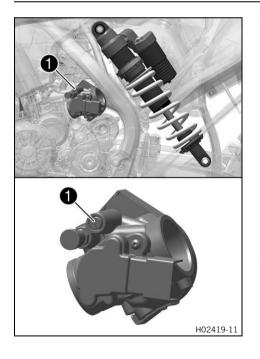

### 17.4 Adjusting the idle speed 🔌

### Warning

**Danger of accidents** The engine may go out spontaneously if the idle speed is set too low.

- Set the idle speed to the specified value. (Your authorized KTM workshop will be glad to help.)

- Run the engine until warm.

The cold start button is deactivated – A further ¼ turn returns the cold start button back to the basic position.
 (
 p. 22)

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Adjust the idle speed by turning idle speed adjusting screw 1.

### Guideline

Idle speed	1,400 1,500 rpm
Tachometer (45129075000)	

### Info

Turning counterclockwise lowers the idle speed.
Turning clockwise raises the idle speed.
Make the setting in small steps.
An incorrect idle speed can have a negative impact on overall engine running.
The idle speed adjusting screw is unscrewed 1.5 turns ex works.

### 17.5 Programming ambient pressure

### Danger

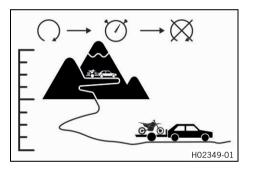

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

### Info

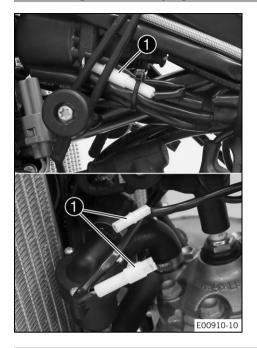

If the vehicle is ridden with the engine running at various heights above sea level, the ambient pressure is programmed on an ongoing basis.

If the vehicle is transported over great differences in height, the ambient pressure must be reprogrammed.

- Start the vehicle at the new height above sea level and switch off the engine again.
- Wait for at least five seconds.
- Start the vehicle again and check the response of the vehicle.
  - » If the response has not improved:
    - Repeat procedure.

### 17.6 Ignition curve plug-in connector

Plug-in connector **1** of the ignition timing map adjustment is located on the frame under the fuel tank.

#### Info

The ignition timing map connector has no function in the homologated (restricted) condition of the motorcycle.

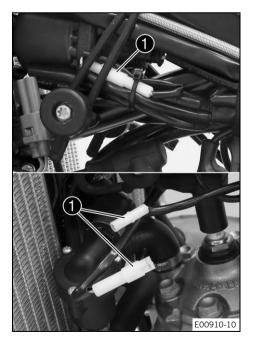

#### Possible states

- Soft The plug-in connector of the ignition timing map adjustment is disconnected to achieve better rideability.
- Performance The plug-in connector of the ignition timing map adjustment is joined to achieve higher performance.

### 17.7 Changing the ignition timing map

### • Info

The ignition timing map connector has no function in the homologated (restricted) condition of the motorcycle.

#### **Preparatory work**

- Remove the seat. (🕮 p. 80)
- Remove the fuel tank. 🔌 (🕮 p. 85)

### Switching the ignition timing map from Performance to Soft

- Disconnect plug-in connector ① of the ignition timing map adjustment.
- Soft better rideability

#### Switching the ignition timing map from Soft to Performance

- Join plug-in connector **1** of the ignition timing map adjustment.
  - Performance better performance

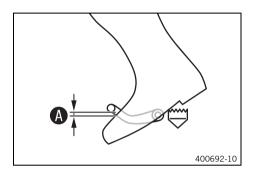

### **Finishing work**

- Install the fuel tank. 🔌 (🕮 p. 87)
- Mount the seat. (🕮 p. 80)

### 17.8 Checking the basic position of the shift lever

### lnfo

When driving, the shift lever must not touch the rider's boot when in the basic position. When the shift lever keeps touching the boot, the transmission will be subject to an excessive load.

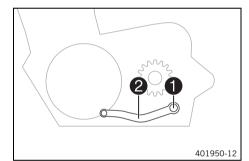

Sit on the vehicle in the riding position and determine distance A between the upper edge of your boot and the shift lever.

Distance between shift	10 20 mm (0.39
lever and upper edge of	0.79 in)
boot	

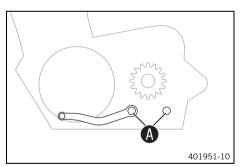

- » If the distance does not meet specifications:

### 17.9 Adjusting the basic position of the shift lever 🔌

Remove screw **①** with the washers and take off shift lever **②**.

Clean gear teeth (A) of the shift lever and shift shaft.

- and engage the gearing.
  - Info

\_

\_

The range of adjustment is limited. The shift lever must not come into contact with any other vehicle components during the shift procedure.

Mount the shift lever on the shift shaft in the required position

- Mount and tighten screw 1 with washers.

Guideline

Screw, shift	M6	14 Nm (10.3 lbf ft)
lever		Loctite®243™

139

### 18.1 Changing the fuel screen 🔌

### Danger

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

### Warning

Danger of poisoning Fuel is poisonous and a health hazard.

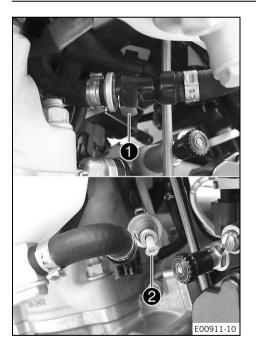

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

#### Warning

Environmental hazard Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Clean plug-in connection 1 of the fuel line thoroughly with compressed air.

### • Info

- Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line clogs the injection valve!
- Disconnect the plug-in connection of the fuel line.

- Remaining fuel may flow out of the fuel hose.
- Pull fuel screen 2 out of the connecting piece.
- Insert the new fuel screen all the way into the connecting piece.
- Lubricate the O-ring and join the plug-in connection of the fuel line.

#### SERVICE WORK ON THE ENGINE 18

### Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

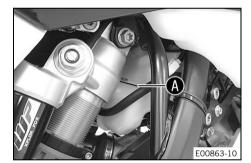

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and check the response.

#### 18.2 **Checking 2-stroke oil level**

### Warning

**Engine failure** The engine will not be lubricated unless there is 2-stroke oil in the oil tank. If the oil level warning light lights up, the 2-stroke oil is sufficient for the remaining tank of fuel.

- As soon as the oil level warning light lights up, ride for no longer than until the remaining fuel in the tank is depleted.
- At the next opportunity add 2-stroke oil before you refuel.
- Time the oil pump if the 2-stroke oil hose has been removed or the 2-stroke oil tank has been fully depleted in error.

#### **Preparatory work**

Stand the motorcycle upright on a horizontal surface. \_

#### Main work

Check the 2-stroke oil level in the oil tank.

#### Info

For one tank of fuel, the 2-stroke oil tank must be filled up to at least the MINmarking (A).

The 2-stroke oil tank must be completely if possible.

- If the 2-stroke oil level is too low:
- Add 2-stroke oil. (🕮 p. 50)

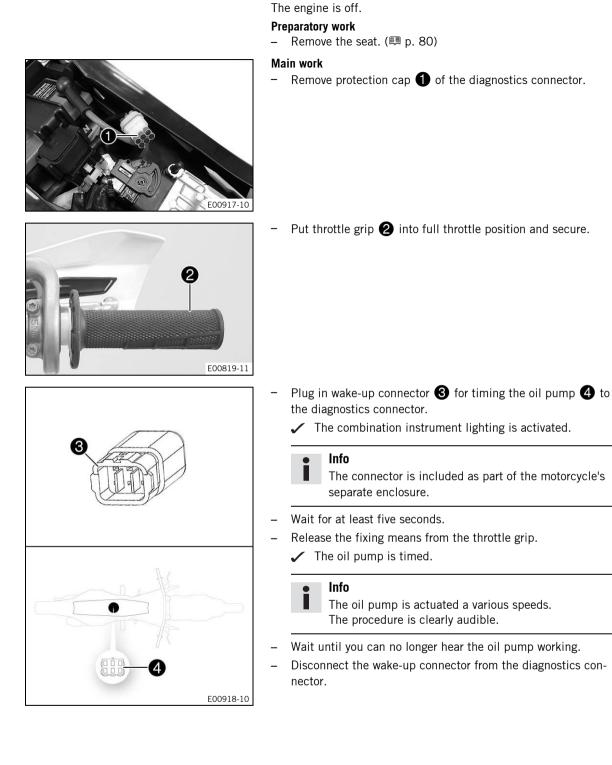

#### 18.3 Timing the oil pump 🔌

### Warning

**Engine failure** The engine will not be lubricated unless there is 2-stroke oil in the oil tank.

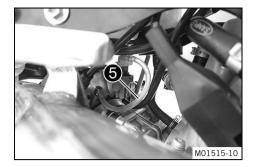

- If the oil level warning light lights up, the 2-stroke oil is sufficient for the remaining tank of fuel.
- As soon as the oil level warning light lights up, ride for no longer than until the remaining fuel in the tank is depleted.
- At the next opportunity add 2-stroke oil before you refuel.
- Time the oil pump if the 2-stroke oil hose has been removed or the 2-stroke oil tank has been fully depleted in error.

## **18 SERVICE WORK ON THE ENGINE**

Condition

# **18 SERVICE WORK ON THE ENGINE**

- Check where air bubbles are visible in the hose **5**.
  - » If air bubbles are visible:
    - Repeat the entire procedure until air bubbles are no longer visible.
- Mount protection cap on the diagnostics connector.

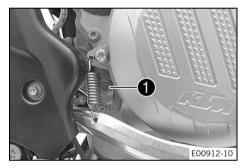

#### **Finishing work**

- Mount the seat. (🕮 p. 80)

#### 18.4 Checking the gear oil level

#### Info

The gear oil level must be checked when the engine is cold.

#### **Preparatory work**

- Stand the motorcycle upright on a horizontal surface.

#### Main work

- Detach the foot brake lever spring.
- Remove screw for checking gear oil level 1.
- Check the gear oil level.

A small quantity of gear oil must run out of the drilled hole.

- » If no gear oil runs out:
  - Add gear oil. \land (🕮 p. 145)
- Mount and tighten the gear oil monitoring screw.

Guideline

Screw, gear oil level	M6	10 Nm (7.4 lbf ft)
check		

- Attach the foot brake lever spring.

#### 18.5 Changing the gear oil 🔦

Warning

Danger of scalding Engine and gear oil get very hot when the motorcycle is ridden.

- Wear suitable protective clothing and safety gloves.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

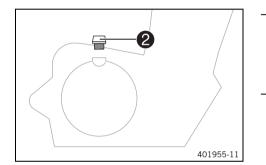

#### Warning

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations. Info

Drain the gear oil while the engine is at operating temperature.

# E00913-10

#### Preparatory work

#### (All Six Days models)

- Remove the engine guard. (🕮 p. 98)
- Park the motorcycle on a level surface.
- Place a suitable container under the engine.

#### Main work

- Remove gear oil drain plug **1** with magnet. \_
- \_ Let the gear oil drain fully.
- Thoroughly clean the gear oil drain plug with magnet. \_
- Clean the sealing surface on the engine.
- Mount and tighten gear oil drain plug 1 with the magnet and a new seal ring.

Guideline

Gear oil drain plug	M12x1.5	20 Nm (14.8 lbf ft)
with magnet		

Remove filler plug **2** and fill up with gear oil.

	-	
Gear oil	0.80	Engine oil
	(0.85 qt.)	(15W/50)
		(🕮 p. 162)

Mount and tighten the oil filler plug.

#### Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and check that it is oil-tight.

#### **Finishing work**

Check the gear oil level. (
p. 143)

#### (All Six Days models)

#### SERVICE WORK ON THE ENGINE 18

#### 18.6 Adding gear oil 🔧

# Info

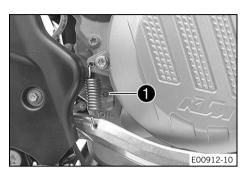

Too little gear oil or poor-quality gear oil results in premature wear to the transmission. Gear oil must only be topped up when the engine is cold.

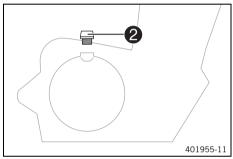

#### **Preparatory work**

Park the motorcycle on a level surface. \_

#### Main work

- Detach the foot brake lever spring. \_
- Remove screw for checking gear oil level **①**.

- Remove filler plug **2**.
- Add gear oil until it emerges from the drill hole of the gear oil \_ monitoring screw.

Engine oil (15W/50) (🕮 p. 162)

Mount and tighten the gear oil monitoring screw. Guideline

Screw, gear oil level check	M6	10 Nm (7.4 lbf ft)

- Mount and tighten filler plug **2**.
- Attach the foot brake lever spring.

## Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and check that it is oil-tight.

#### **Finishing work**

Check the gear oil level. (
p. 143)

#### 19.1 Cleaning the motorcycle

#### Note

Material damage Components become damaged or destroyed if a pressure cleaner is used incorrectly.

The high pressure forces water into the electrical components, connectors, throttle cables, and bearings, etc. Pressure which is too high causes malfunctions and destroys components.

- Do not direct the water jet directly on to electrical components, connectors, throttle cables or bearings.
- Maintain a minimum distance between the nozzle of the pressure cleaner and the component.
   Minimum clearance
   60 cm (23.6 in)

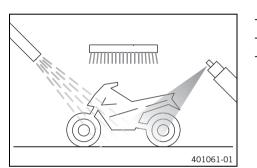

#### Warning

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### • Info

To maintain the value and appearance of the motorcycle over a long period, clean it regularly. Avoid direct sunshine when cleaning the motorcycle.

- Close off the exhaust system to keep water from entering.
- Remove coarse dirt particles with a gentle water jet.
- Spray heavily soiled parts with a normal commercial motorcycle cleaner and then brush off with a soft brush.

Motorcycle cleaner (🕮 p. 164)

#### Info

- Use warm water containing normal motorcycle cleaner and a soft sponge. Never apply motorcycle cleaner to a dry vehicle; always rinse the vehicle with water first.
- After rinsing the motorcycle with a gentle spray of water, allow it to dry thoroughly.
- Remove the closure of the exhaust system.

#### Warning

**Danger of accidents** Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- After cleaning, ride the vehicle a short distance until the engine warms up.

#### Info

The heat produced causes water at inaccessible locations in the engine and on the brake system to evaporate.

- After the motorcycle has cooled off, lubricate all moving parts and bearings.
- Clean the chain. (🕮 p. 89)
- Treat bare metal (except for brake discs and the exhaust system) with a corrosion inhibitor.

Preserving materials for paints, metal and rubber (
p. 164)

 Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

#### (All EXC models)

- Oil the steering lock.

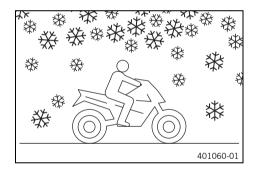

Universal oil spray (🕮 p. 165)

19.2 Checks and maintenance steps for winter operation

#### Info

If you use the motorcycle in winter, salt can be expected on the roads. You should therefore take precautions against aggressive road salt.

If the vehicle has been used on salted roads, use cold water for cleaning after riding. Warm water enhances the corrosive effects of salt.

- Clean the motorcycle. (🕮 p. 146)
- Clean the brakes.

#### Info

After **EVERY** trip on salted roads, thoroughly wash the cool and installed brake calipers and brake linings with cold water and dry carefully. After riding on salted roads, thoroughly wash the vehicle with cold water and dry it well.

 Treat the engine, the swingarm, and all other bare or galvanized parts (except brake discs) with a wax-based corrosion inhibitor.

#### Info

Corrosion inhibitor is not permitted to come in contact with the brake discs as this would greatly reduce the braking force.

– Clean the chain. (🕮 p. 89)

#### 20.1 Storage

# Warning

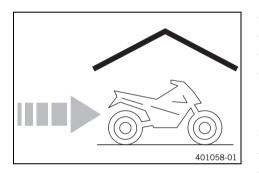

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

#### Info

If you plan to garage the motorcycle for a longer period, perform the following steps or have them performed.

Before storing the motorcycle, check all parts for function and wear. If service, repairs, or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

- Clean the motorcycle. (
   p. 146)
- Change the gear oil. 🔌 (🕮 p. 143)
- Check the antifreeze and coolant level. (
  P. 129)
- When refueling for the last time before taking the motorcycle out of service, add fuel additive.

Fuel additive (🕮 p. 164)

- Refuel. (🕮 p. 49)
- Add 2-stroke oil. (🕮 p. 50)
- Check the tire air pressure. (🕮 p. 115)
- Remove the battery. 🔌 (🕮 p. 117)
- Recharge the battery. 🔧 (🕮 p. 118)

Guideline

Storage temperature of bat-	0 35 °C (32 95 °F)
tery without direct sunshine	

- Store the vehicle in a dry location that is not subject to large fluctuations in temperature.

## Info

KTM recommends jacking up the motorcycle.

- Cover the vehicle with a tarp or similar cover that is permeable to air.

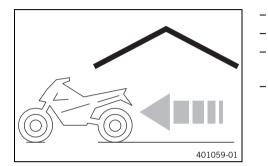

4

## Info

i

Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion. Avoid running the engine for a short time only. Because the engine will not warm up sufficiently, the water vapor produced during combustion will condense, causing engine parts and the exhaust system to rust.

## 20.2 Preparing for use after storage

- Remove the motorcycle from the lift stand. (
  Remove the motorcycle from the lift stand.
- Install the battery. 🔧 (🕮 p. 118)
- Make a test ride.

Faults	Possible cause	Action
The engine cannot be cranked (electric starter)	Operating error	<ul> <li>Carry out the start procedure.</li> <li>(         p. 45)     </li> </ul>
	Battery discharged	– Recharge the battery. 🔌 (🕮 p. 118)
		<ul> <li>Check the charging voltage. </li> </ul>
		<ul> <li>Check the closed current.</li> </ul>
		<ul> <li>Check the stator winding of the alter- nator.</li> </ul>
	Main fuse is blown	<ul> <li>Change the main fuse. (         p. 120)     </li> </ul>
	Starter relay faulty	<ul> <li>Check the starter relay.</li> </ul>
	Starter motor faulty	<ul> <li>Check the starter motor.</li> </ul>
The engine turns but does not start	Operating error	- Carry out the start procedure. (
	The plug-in connection of the fuel line is not joined	- Join the plug-in connection of the fuel line.
	Idle speed is not set correctly	– Adjust the idle speed. ◀ ( p. 136)
	Fuel supply interrupted	- Check the fuel tank breather.
	Spark plug oily or wet	<ul> <li>Clean and dry the spark plug, or change it if necessary.</li> </ul>
	Electrode distance (plug gap) of spark plug too wide	<ul> <li>Adjust the plug gap.</li> <li>Guideline</li> <li>Spark plug electrode gap</li> <li>1.3 mm (0.051 in)</li> </ul>
	Faulty ignition	<ul> <li>Ignition coil - check the primary wind- ing. ▲</li> </ul>
		<ul> <li>Check the spark plug connector.</li> </ul>
		<ul> <li>Check the stator winding of the alter- nator.</li> </ul>
	Short-circuit cable in wiring	- Check wiring harness (visual check).
	harness frayed, kill switch or emergency OFF switch defec- tive	- Check the electrical system.
	The connector or ignition coil is loose or oxidized	<ul> <li>Clean the connector and treat it with contact spray.</li> </ul>
	Defect in the fuel injection sys- tem	<ul> <li>Check the cabling for damage and the electrical plug-in connections for corro- sion and damage.</li> </ul>
		<ul> <li>Read out the fault memory using the KTM diagnostics tool.</li> </ul>
Engine has no idle	Spark plug defective	- Change the spark plug.
	Faulty ignition	<ul> <li>Ignition coil - check the primary wind- ing. </li> </ul>
		<ul> <li>Check the spark plug connector.</li> </ul>
		<ul> <li>Check the stator winding of the alternator.</li> </ul>
	Idle speed is not set correctly	– Adjust the idle speed. 🔌 (🕮 p. 136)

Faults	Possible cause	Act	tion
Engine does not speed up	Defect in the fuel injection sys- tem	-	Check the cabling for damage and the electrical plug-in connections for corrosion and damage.
		-	Read out the fault memory using the KTM diagnostics tool. $\checkmark$
	Faulty ignition	-	lgnition coil - check the primary wind- ing. 🜂
		-	Check the spark plug connector. 🔦
		-	Check the stator winding of the alter- nator. 🔦
	Ambient pressure is incorrectly stored	-	Program ambient pressure. (🕮 p. 137)
Engine has too little power	Air filter very dirty	-	Clean the air filter and air filter box. 🔧 (🕮 p. 82)
	Fuel filter is very dirty	-	Change the fuel filter. 🔦
	Fuel screen is very dirty	-	Change the fuel screen. 🔧 (🕮 p. 140)
	Defect in the fuel injection sys- tem	-	Check the cabling for damage and the electrical plug-in connections for corrosion and damage.
		-	Read out the fault memory using the KTM diagnostics tool. $\checkmark$
	Fuel supply interrupted	-	Check the fuel tank breather.
	Exhaust system leaky,	-	Check exhaust system for damage.
	deformed or too little glass fiber yarn filling in main silencer	-	Change glass fiber yarn filling in the main silencer. ◀ (鷗 p. 84)
	Faulty ignition	-	lgnition coil - check the primary wind- ing. 🌂
		-	Check the spark plug connector. 🔧
		-	Check the stator winding of the alternator. $\blacktriangleleft$
	Diaphragm or reed valve hous- ing damaged	-	Check the diaphragm and reed valve housing.
	Ambient pressure is incorrectly stored	-	Program ambient pressure. (🕮 p. 137)
The engine dies during the trip	Lack of fuel	-	Refuel. (🕮 p. 49)
	The engine takes in false air	-	Check that the intake flange is firmly seated.
	The connector or ignition coil is loose or oxidized	-	Clean the connector and treat it with contact spray.
	Ambient pressure is incorrectly stored	-	Program ambient pressure. (🕮 p. 137)
Engine overheats	Too little coolant in cooling sys-	-	Check the cooling system for leakage.
	tem	-	Check the coolant level. (🛤 p. 130)
	Too little air stream	-	Switch off engine when stationary.
	Radiator fins very dirty	-	Clean the radiator fins.

Faults	Possible cause	Action
Engine overheats	Foam formation in cooling sys- tem	<ul> <li>Drain the coolant. ◄ (톜 p. 130)</li> <li>Refill with coolant. ◄ (톜 p. 131)</li> </ul>
	Damaged cylinder head or cylinder head gasket	<ul> <li>Check the cylinder head and cylinder head gasket.</li> </ul>
	Bent radiator hose	– Change the radiator hose. 🔧
	Thermostat defective	<ul> <li>Check the thermostat.</li> <li>Guideline</li> <li>Opening temperature: 70 °C (158 °F)</li> </ul>
White smoke emission (steam in exhaust gas)	Damaged cylinder head or cylinder head gasket	<ul> <li>Check the cylinder head and cylinder head gasket.</li> </ul>
Gear oil exits at the vent hose	Too much gear oil added	– Check the gear oil level. (🕮 p. 143)
Water in the gear oil	Damaged shaft seal ring or water pump	<ul> <li>Check the shaft seal ring and water pump.</li> </ul>
Malfunction indicator lamp lights up or flashes	Defect in the fuel injection sys- tem	<ul> <li>Check the cabling for damage and the electrical plug-in connections for corro- sion and damage.</li> </ul>
		<ul> <li>Read out the fault memory using the KTM diagnostics tool.</li> </ul>
The battery is discharged	The battery is not being charged by the alternator	<ul> <li>Check the charging voltage. </li> <li>Check the stator winding of the alternator. </li> </ul>
	Unwanted power consumer	<ul> <li>Check the open-circuit current. </li> </ul>
Values in combination instrument deleted (time, stop watch, lap times)	The combination instrument battery is empty	- Change the combination instrument. (톜 p. 127)

# 22.1 Engine

# 22.1.1 All 250 models

Design	1-cylinder 2-stroke engine, water-cooled, with reed	
	intake, exhaust control and transfer duct injection	
Displacement	249 cm <sup>3</sup> (15.19 cu in)	
Stroke	72 mm (2.83 in)	
Hole	66.4 mm (2.614 in)	
Idle speed	1,400 1,500 rpm	
Exhaust valve, beginning of adjustment	5,500 rpm	
Crankshaft bearing	1 grooved ball bearing/1 roller bearing	
Conrod bearing	Needle bearing	
Piston pin bearing	Needle bearing	
Piston	Cast aluminum	
Piston rings	2 half keystone rings	
Engine lubrication	Separate lubrication	
X distance (upper edge of piston to upper edge of cylinder)	0 0.10 mm (0 0.0039 in)	
Z distance (height of control flap)	49 mm (1.93 in)	
Primary transmission	26:73	
Clutch	Multidisc clutch in oil bath/hydraulically activated	
Transmission	6-gear, claw shifted	
Transmission ratio		
First gear	14:32	
Second gear	16:26	
Third gear	20:25	
Fourth gear	22:23	
Fifth gear	25:22	
Sixth gear	26:20	
Alternator	12 V, 196 W	
Ignition system	Contactless controlled, fully electronic ignition with digital ignition adjustment, type Kokusan	
Spark plug	NGK ZGR 7 G1	
Spark plug electrode gap	1.3 mm (0.051 in)	
Cooling	Water cooling, permanent circulation of coolant by water pump	
Starting aid	Kick starter and electric starter	

# 22.1.2 All 300 models

Design	1-cylinder 2-stroke engine, water-cooled, with reed intake, exhaust control and transfer duct injection
Displacement	293.2 cm <sup>3</sup> (17.892 cu in)
Stroke	72 mm (2.83 in)
Hole	72 mm (2.83 in)
Idle speed	1,400 1,500 rpm

#### Brake fluid DOT 4 / DOT 5.1

#### Standard/classification

- DOT

```
Guideline
```

 Use only brake fluid that complies with the specified standard (see specifications on the container) and that exhibits the corresponding properties.

#### Recommended supplier

Castrol

– REACT PERFORMANCE DOT 4

#### Motorex®

- Brake Fluid DOT 5.1

#### Coolant

#### Guideline

- Only use high-grade, silicate-free coolant with corrosion inhibitor additive for aluminum motors. Low grade and unsuitable antifreeze causes corrosion, deposits and frothing.
- Do not use pure water as only coolant is able to meet the requirements needed in terms of corrosion protection and lubrication properties.
- Only use coolant that complies with the requirements stated (see specifications on the container) and that has the relevant properties.

Antifreeze protection to at least	-25 °C (-13 °F)
-----------------------------------	-----------------

The mixture ratio must be adjusted to the necessary antifreeze protection. Use distilled water if the coolant needs to be diluted.

The use of premixed coolant is recommended.

Observe the coolant manufacturer specifications for antifreeze protection, dilution and miscibility (compatibility) with other coolants.

#### Recommended supplier Motorex<sup>®</sup> – COOLANT M3.0

#### Engine oil (15W/50)

#### Standard/classification

- JASO T903 MA (🕮 p. 166)
- SAE (🕮 p. 166) (15W/50)

#### Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that
possess the corresponding properties.

#### Recommended supplier Motorex®

```
- Top Speed 4T
```

#### Engine oil, 2-stroke

#### Standard/classification

– JASO FD (🕮 p. 166)

#### Guideline

Only use high grade 2-stroke engine oil of a reputable brand.

Fully synthetic

#### **Recommended supplier**

#### Motorex®

Cross Power 2T

#### Fork oil (SAE 4) (48601166S1)

#### Standard/classification

– SAE (🕮 p. 166) (SAE 4)

#### Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

#### Shock absorber fluid (SAE 2.5) (50180751S1)

#### Standard/classification

– SAE (🕮 p. 166) (SAE 2.5)

#### Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

#### Super unleaded (ROZ 95/RON 95/PON 91)

#### Standard/classification

- DIN EN 228 (ROZ 95/RON 95/PON 91)

#### Guideline

- Only use unleaded super fuel that matches or is equivalent to the specified fuel grade.
- Fuel with an ethanol content of up to 10 % (E10 fuel) is safe to use.

# Info

Do **not** use fuel containing methanol (e. g. M15, M85, M100) or more than 10 % ethanol (e. g. E15, E25, E85, E100).

# 24 AUXILIARY SUBSTANCES

#### Air filter cleaner

Recommended supplier Motorex<sup>®</sup>

Racing Bio Dirt Remover

#### **Chain cleaner**

Recommended supplier Motorex<sup>®</sup> – Chain Clean

#### **Fuel additive**

Recommended supplier Motorex<sup>®</sup> – Fuel Stabilizer

#### **High viscosity grease**

Recommended supplier SKF<sup>®</sup> – LGHB 2

#### Long-life grease

Recommended supplier Motorex® – Bike Grease 2000

#### Motorcycle cleaner

Recommended supplier Motorex® – Moto Clean

#### **Off-road chain spray**

Recommended supplier Motorex® – Chainlube Offroad

#### Oil for foam air filter

Recommended supplier Motorex® – Racing Bio Liquid Power

#### Preserving materials for paints, metal and rubber

Recommended supplier Motorex®

Moto Protect

# Special cleaner for glossy and matte paint finishes, metal and plastic surfaces

Recommended supplier Motorex® – Quick Cleaner

#### Universal oil spray

Recommended supplier Motorex<sup>®</sup> – Joker 440 Synthetic

# **25 STANDARDS**

#### **JASO T903 MA**

Different technical development directions required a separate specification for motorcycles – the **JASO T903 MA** standard.

Earlier, engine oils from the automobile industry were used for motorcycles because there was no separate motorcycle specification.

Whereas long service intervals are demanded for automobile engines, the focus for motorcycle engines is on high performance at high engine speeds.

In most motorcycle engines, the transmission and clutch are lubricated with the same oil.

The JASO MA standard meets these special requirements.

#### SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.

#### **JASO FD**

JASO FD is a classification for a 2-stroke engine oil that was specifically developed for the extreme demands of racing. Thanks to first rate synthetic esters and specially designed additives, superb combustion is achieved even under extreme operating conditions.

TPI	Injection into transfer ducts (Trans- fer Port Injection)	Electronic fuel injection in which two injection valves in the transfer ducts of the cylinders are used
OBD	On-board diagnosis	Vehicle system, which monitors the specified parame- ters of the vehicle electronics

Art. no.	Article number
ca.	circa
cf.	compare
e.g.	for example
etc.	et cetera
i.a.	inter alia
no.	number
poss.	possibly

#### 28.1 Red symbols

Red symbols indicate an error condition that requires immediate intervention.

	The oil level warning lamp lights up red – Oil level has reached the MINmarking. Ride for no
	more than until the remaining fuel in the tank is depleted and at the next opportunity refuel
Ŭ	with 2-stroke oil.

## 28.2 Yellow and orange symbols

Yellow and orange symbols indicate an error condition that requires prompt intervention. Active driving aids are also represented by yellow or orange symbols.

ſ,	Malfunction indicator lamp lights up/flashes yellow – The OBD has detected an error in the vehicle electronics. Come safely to a halt, and contact an authorized KTM workshop.
<b>6</b>	The fuel level warning lamp lights up yellow – The fuel level has reached the reserve mark.

#### 28.3 Green and blue symbols

Green and blue symbols reflect information.

ED	The high beam indicator lamp lights up blue – The high beam is switched on.
	Turn signal indicator lamp flashes green – The turn signal is switched on.
